Introduction

Moxa's MC-1100 Series DIN-rail mountable, fanless, x86 embedded computers are based on the Intel® Atom™ E3800 Series processor, feature the most reliable I/O design to maximize connectivity, and support wireless modules (Wi-Fi/3G/LTE), making them suitable for a diverse range of communication applications.

With a wide operating temperature range (-40 to 70°C) and compliance with safety, EMI, and EMS standards, the MC-1100 Series of computers are ideal for intelligent computing and communication solutions operating in critical environments, including marine communication, oil & gas field site monitoring, and transportation.

The MC-1100 Series supports "Moxa Hardware Monitoring" for device I/O status monitoring and alerts, system temperature monitoring and alerts, and system power management. The ability to closely monitor a system status makes it easier to recover from errors and provides the most reliable platform for your applications.

Package Checklist

- MC-1100 embedded computer
- Terminal block to power jack converter
- DIN-rail mounting kit
- Quick installation guide (printed)
- Warranty card

NOTE: Please notify your sales representative if any of the above items are missing or damaged.

Product Features

MC-1100 embedded computers support the following features:

- Intel Atom Quad-core E3845 processor
- -40 to 70°C system operating temperature
- One mini-PCIe socket for wireless modules: Wi-Fi, 3G, LTE, GPS, and Bluetooth
- Variety of interfaces: Up to 2 serial ports, 4 Ethernet LAN ports, 4 DIs, 4 DOs, SD slot, 2 USB ports, VGA port, display port, wireless
- Certified for mission-critical environments: IEC-60945, DNV, UL C1D2, ATEX/ IECEx
- Windows 7 Embedded and Debian 8 platform support
- Moxa Proactive Monitoring utility for system hardware health monitoring
- Moxa Smart Recovery utility to recover system from boot failure (W7E only)

MC-1100 Hardware Specifications

Computer

CPU:

- MC-1100-E4 Series: Intel® Atom™ processor E3845 (quad-core, 1M cache, 1.91 GHz)
- MC-1100-E2 Series: Intel® Atom™ processor E3826 (dual-core, 1M cache, 1.46 GHz)

Operating System: Supports Windows 7 Embedded 64 bits and Linux Debian 8*

System Memory: 1 DDR3L SO-DIMM slot, 2 GB pre-installed; support 2 GB, 4 GB, and 8 GB.

USB: USB 2.0 hosts x 2, Type A connectors

Storage:

- CFast: 1 CFast socket for OS storage; CFast supports 16 GB, 32 GB, 64 GB, and 128 GB
- SD: 1 SD 3.0 (SDHC/SDXC) socket for storage expansion;

SD supports 16 GB, 32 GB, 64 GB, and 128 GB (only for the MC-1111 and MC-1121 Series)

Other Peripherals

USB: 2 bootable USB 2.0 ports (type A)

TPM: TPM1.2 (only for the MC-1112 and MC-1122 Series)

Expansion Slot: 1 MiniPCIe socket; USB signal for wireless Wi-Fi/3G/LTE modules

USIM Slots: 1

Display

Graphics Controller: Intel® HD Graphics 4000

Display Interface:

- VGA interface x 1: 15-pin D-Sub connector (female), with resolution up to 1920 x 1200 pixels at 75 Hz
- Display port interface x 1: Display port connector, with resolution up to 2560 x 1600 pixels at 60 Hz (only for the MC-1111 and MC-1121 Series)

Ethernet Interface

LAN: 2 or 4 auto-sensing 10/100/1000 Mbps ports (RJ45)

Magnetic Isolation Protection: 1.5 kV built in

Serial Interface

Serial Standards: 2 or 4 RS-232/422/485 ports, software-selectable (DB9 male)

Serial Communication Parameters

Data Bits: 5, 6, 7, 8

Stop Bits: 1, 1.5, 2

Parity: None, Even, Odd, Space, Mark

Flow Control: RTS/CTS, XON/XOFF, ADDC® (automatic data direction control) for RS-485

Baudrate: 50 bps to 115.2 kbps

Serial Signals

RS-232: TxD, RxD, DTR, DSR, RTS, CTS, DCD, GND

RS-422: TxD+, TxD-, RxD+, RxD-, GND

RS-485-4w: TxD+, TxD-, RxD+, RxD-, GND

RS-485-2w: Data+, Data-, GND

Digital Input

Input Channels: DI x 4 (non-isolation)

Input Voltage:

Logic level 0: Close to GND

Logic level 1: Open

Digital Output

Output Channels: DO x 4 (Non-Isolation)

Output Voltage:

Logic level 0: 0 to 0.55 V

Logic level 1: 5 VDC (4.7 to 5 V)

Output Clamping Current: 24 mA

LEDs

System: Power

Storage: CFast, SD

LAN: 2 LEDs per port (100/1000 Mbps)

Serial: 2 LEDs per port (Tx and Rx)

Physical Characteristics

Housing: Aluminum, sheet metal

Weight:

• MC-1111/1112: 1.45 kg (3.20 lb)

• MC-1121/1122: 1.75 g (3.86 lb)

Dimensions:

• MC-1111/1112: 132 x 122 x 68 mm (5.20 x 4.81 x 2.68 in)

• MC-1121/1122: 132 x 122 x 87 mm (5.20 x 4.81 x 3.43 in)

Mounting: DIN rail, wall (DNV)

Environmental Limits

Operating Temperature: -40 to 70°C (-40 to 158°F)
(DNV: -25 to 70°C)

Storage Temperature: -45 to 75°C (-49 to 167°F)

Ambient Relative Humidity: 5 to 95% (non-condensing)

Anti-Vibration:

• 0.7 g @ DNV GL (Class A), sine wave, 2-100 Hz, 1 Oct./min., 1.5 hr per axis

• 1 g @ DNV GL, random wave, 3-100 Hz, 2.5 hr per axis

Anti-Shock: 50g/11ms ±X, ±Y, ±Z, 3 shocks each axis w/ CFast, SD

Power Requirements

Input Voltage: 12/24 VDC typical (11.4 to 36 VDC tolerance, 2-pin terminal block)
(DNV: 24 VDC)

Power Consumption: Less than 30 W

Standards and Certifications

Safety: UL 60950-1

Hazardous Environments: Class 1 Division 2*

EMC: EN 55032, EN 55024

EMI: CISPR 32, FCC Part 15B Class A

EMS:

Hardware Introduction

The MC-1100 Series embedded computers are compact, well-designed, and rugged enough for industrial applications. LED indicators help you monitor performance and identify trouble spots, multiple serial ports allow you to connect different devices for wireless operation, and the reliable and stable hardware platform lets you devote your attention to developing your applications.

Hardware Connection Description

In this chapter, we show how to connect the embedded computers to the network and to various devices.

The following topics are covered in this chapter:

❒ **Installing a Wireless Module**

❒ **Installing the MC-1100**

❒ **Wiring Requirements**

> ➤ Connecting the Power

> ➤ Grounding the Unit

> ➤ Connecting to a Network

> ➤ Connecting to a Serial Device

> ➤ Installing an SDHC/SDXC Card (MC-1111 and MC-1121 Only)

❒ **Connecting to a USB Device**

❒ **DI/DO**

❒ **RTC Battery Replacement**

Installing a Wireless Module

Both the MC-1121 and MC-1122 models have been provided with an in-built mini-PCIe socket for installing a wireless module.

To install a wireless modules in your MC-1100 computer, do the following:

STEP 1: Loosen the six screws on the right panel and the two screws on the bottom panel.
STEP 2: Open the right cover to reveal the mini-PCIe socket.

STEP 3: Insert the wireless module card at an angle.

STEP 4: Push the wireless module card down.
STEP 5: Secure the wireless module card with the 2 screws included in the package.

STEP 6: Connect the antenna cable connector to the wireless module card.

The available connectors are:
- Main RF antenna (ANT)
- RX Diversity Antenna (DIV)
- GNSS Antenna (GPS)
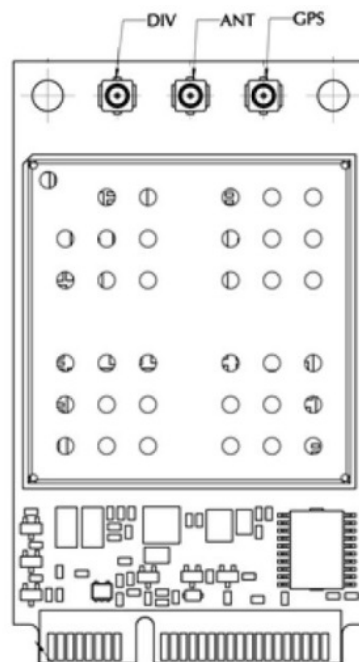

STEP 7: Replace the side and bottom covers and secure them with screws.

STEP 8: (Optional) You can install external 3G, 4G, and Wi-Fi antennas from Moxa to increase the wireless coverage. Contact a Moxa sales representative for details.

An MC-1100 computer with external antennas installed is shown here.

Installing the MC-1100

DIN-Rail Mounting

The MC-1100 comes with a DIN-rail mounting kit for installing the computer on a DIN rail.

Installation:

STEP 1:
Use 4 screws to attach the DIN-rail mounting bracket to the MC-1100's rear panel and tighten the screws to secure the bracket.
STEP 2:
Insert the upper lip of the DIN rail into the DIN-rail mounting kit.

STEP 3:
Press the MC-1100 towards the DIN rail until it snaps into place.
Removal:

STEP 1:

To unmount the MC-1100, pull down the latch provided at the base of the mounting kit with a screwdriver.

STEPS 2:

Slightly pull the MC-1100 forward and lift up to detach it from the DIN rail.
Wall or Cabinet Mounting (DNV)

Use the optional wall-mounting kit to install the MC-1100 on to a wall.

NOTE	The wall mounting kit can be purchased separately.

STEP 1:

Attach the wall-mounting brackets to the rear side of the MC-1100 by using two screws per bracket.
STEP 2:

Use four screws per side on the wall-mounting bracket to attach the MC-1100 to a wall or cabinet.
Wiring Requirements

In this section, we describe how to connect serial devices to the MC-1100 embedded computer.
Be sure to read and follow these common safety precautions before proceeding with the installation of any electronic device:

• Use separate paths to route wiring for power and devices. If power wiring and device wiring paths must cross, make sure the wires are perpendicular at the crossing point.
NOTE: Do not run signal or communication wiring together with power wiring in the same wire conduit. To avoid interference, wires with different signal characteristics should be routed separately.

• Use the type of signal transmitted through a wire to determine which wires should be kept separate. The rule of thumb is that wiring that shares similar electrical characteristics can be bundled together.

• Keep input wiring and output wiring separated.

• For future reference, you should label the wiring used for all of your devices.

⚠️ **ATTENTION**

Safety First!

Be sure to disconnect the power cord before installing and/or wiring your MC-1100.

Wiring Caution!

Calculate the maximum possible current in each power wire and common wire. Observe all electrical codes dictating the maximum current allowable for each wire size. If the current goes above the maximum ratings, the wiring could overheat, causing serious damage to your equipment.

Temperature Caution!

Be careful when handling the unit. When the unit is plugged in, the internal components generate heat, and consequently the outer casing may feel hot to the touch.

Connecting the Power

Power Input
DC 12-36 V

V-
V+
To power on the MC-1100, connect the "terminal block to power jack converter" to the MC-1100's DC terminal block (located on the left side panel), and then connect the power adapter. The system is automatically turned on when the power is plugged in. If it doesn't turn on automatically, press the Power Button to turn on the computer. Note that the Shielded Ground wire should be connected to the top pin of the terminal block. It takes about 30 seconds for the system to boot up. Once the system is ready, the Power LED will light up.

Grounding the Unit

Grounding and wire routing help limit the effects of noise due to electromagnetic interference (EMI). Run the ground connection from the grounding screw (M4) to the grounding surface prior to connecting the power.

Connecting to a Network

To connect the MC-1100 computer to a network, connect a network cable to the embedded computer's Ethernet port and connect the other end of the cable to your Ethernet network. When the cable is properly connected, the LEDs on the embedded computer's Ethernet port turns on to indicate a valid connection.

Two 10/100/1000 Mbps Ethernet ports using RJ45 connectors are located on the front panel of the embedded computer. Refer to the following figures for the location and pin assignments of the Ethernet ports.

NOTE	The pin assignments for the MC-1100 computer's Ethernet port are shown in the following figure. If you create your own Ethernet cable, make sure that you match the pin assignments on the connector of the Ethernet cable.

Connecting to a Serial Device

Use a serial cable to connect your serial device to the embedded computer's serial port. Serial ports P1 to P2 have male DB9 connectors and can be configured for RS-232, RS-422, or RS-485 communication. For information on serial port configuration, refer to the MC-1100 software manual. The location and pin assignments of the serial ports are shown in the following table:

Installing an SDHC/SDXC Card (MC-1111 and MC-1121 Only)

The MC-1100 has an SD slot for storage expansion. The SD slot allows users to plug in a Secure Digital (SD) memory card, which is compliant with the SD 3.0 standard. To install an SD card, do the following:

1. Disconnect the MC-1100 from its power source.
2. Loosen the two screws on the SD/CFast card slot cover to remove the cover.
   The SD slot is located on the right side of the front panel.

MC-1111   **MC-1121**
3. Insert the SD card into the slot and gently push it in with a finger until it locks in place.
   To remove the card, gently push it in to release the card and eject it out of the slot.

⚠️ **ATTENTION**

Be sure to properly orient the CFast card when installing it; otherwise, you may not be able to insert the card all the way into the slot.

---

4. After the SD card is installed correctly, fasten the screws on the SD/CFast card cover.

Connecting to a USB Device

The MC-1100 is provided with one USB 3.0 host with type-A connector on the right-side panel and two USB 2.0 hosts with type-A connectors on the front panel. These ports can be used to connect to an external flash disk or hard drive. You can also use these USB ports to connect to a keyboard or a mouse.

The following figures show the locations of the USB ports.

DI/DO

The MC-1121 comes with a 4-channel digital input and a 4-channel digital output that connect through a terminal block connector. The pin assignments and wiring methods are shown in the diagrams below:

RTC Battery Replacement

The MC-1100's real-time clock is powered by a lithium battery. We strongly recommend that you do not replace the lithium battery without help from a qualified Moxa support engineer. If you need to change the battery, contact the Moxa RMA service team.

⚠️ **ATTENTION**

There is a risk of explosion if the battery is replaced by an incorrect type of battery.

NOTE   The MC-1100 embedded computer can be customized to support an easy RTC battery replacement function. Please contact your Moxa sales representative for details.

BIOS Setup

In this chapter, we describe the BIOS settings for the MC-1100 embedded computer. The BIOS is a set of input/output control routines for peripherals, which can be used to initialize the basic peripheral settings. The BIOS firmware helps boot the system before the operating system is loaded. The BIOS setup allows the user to modify the system configuration for basic input/output peripherals. All of the configurations are stored in the CMOS RAM, which has a backup battery power in case the computer is not connected to a power source. Consequently, the data stored in the CMOS RAM is retained when the system is rebooted or the power is disconnected.

The following topics are covered in this chapter:

❏ **Entering the BIOS Setup**

Upgrading the BIOS

This section describes how to upgrade the BIOS.

⚠️ **WARNING**

An improper BIOS upgrade process may permanently damage the computer. We strongly recommend that you contact Moxa technical support for assistance to obtain all the necessary tools and the most up-to-date advice before attempting to upgrade the BIOS on any Moxa device.

Step 1: Create a Bootable USB Disk

Before upgrading the BIOS, every user should first create a bootable USB drive as a system rescue device.

A useful software suite for creating USB RAM drives can be found by searching for Rufus, which can then be downloaded and used to create a bootable RAM drive.

Complete the following steps to create a bootable USB disk using Rufus:

1. Start Rufus* and then in the "Device" drop-down list select the USB device that you want to use as a bootable disk.
   *Rufus official website:
   https://rufus.akeo.ie/?locale=en_US

2. Select **MBR partition scheme for BIOS or UEFI computers** from the "Partition scheme and target system type" drop-down list so it can boot from a legacy BIOS or UEFI.

3. Select **FAT32 (Default)** from the "File system" drop-down list.

4. Select **4096 bytes (Default)** from the "Cluster size" drop-down list.

5. Enter a drive name in the "New volume label" input box.

6. Check the **Quick format**, **Create a bootable disk using FreeDOS**, and **Create extended label and icon files** options.

7. Click **Start** to format and create the bootable USB drive.
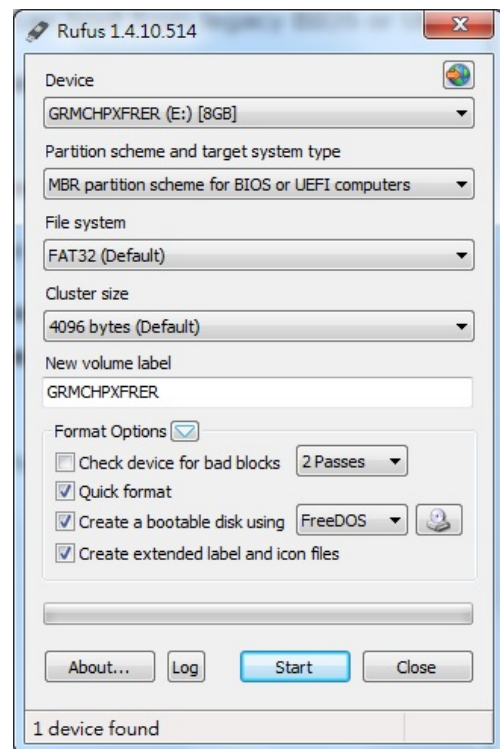

⚠️ **ATTENTION**

When you use a USB drive larger than 4 GB, you will need to convert the file system type to FAT32.

Step 2: Prepare the Upgrade File

You must use the BIOS upgrade installation file to upgrade the BIOS. Contact Moxa technical support for assistance.

1. Get the BIOS upgrade installation file.
   The file name should be in the format: **MC-1100_VxxxSxx.exe** (where "xx" refers to the version numbers).
2. Copy the file to the bootable USB drive.

Step 3: Run the Upgrade Program on the MC-1100 Computer

1. Reboot the computer, and press F2 during the booting process to display the Boot Manager.

3. When the computer finishes booting up, a command window appears. Go to the directory where the upgrade file is located. For example, if the upgrade file is stored in the MC-1100 folder, type `cd MC-1100`.

```
C:\cd MC-1100
```

4. Run the upgrade program by typing `MC-1100S10.exe`.

   Note that the filename for the upgrade program may vary depending on the version.

```

Regulatory Approval Statement

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Class A: FCC Warning! This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the users will be required to correct the interference at their own expense.

Configuring the Serial Interface

In this chapter, we describe how to configure the MC-1100 embedded computer's serial interface.

The following topics are covered in this appendix:

❒ **Overview**
❒ **Configuring the Serial Interface Mode**

Overview

The MC-1100's COM1 and COM2 serial ports support the following serial modes: **RS-232**, **2-wire RS-485**, and **4-wire RS-422/485**.

Configuring the Serial Interface Mode

Complete the following steps to configure the serial interface mode:

1. From the Start menu, Click **All Programs → Moxa → mxSetSerialInterface**.
2. Select the port you would like to configure from the **Port** dropdown box.
3. Select the serial interface mode for the port from the **Mode** dropdown box.
4. Click **OK**.
C

Examples

In this chapter, we provide examples to illustrate how to use the MC-1100 computer for a variety of applications.

The following topics are covered in this appendix:

□ **Serial Interface**
□ **Digital Input/Output**
□ **Watchdog**
□ **Power Control**
