### Overview

The NPort S8000 series combines an industrial device server with a full-function managed Ethernet switch with 4 RS-232/422/485 serial ports, allowing you to easily install, manage, and maintain the product. Combining a device server and switch in one product allows you to

save space in your cabinet, reduce overall power consumption, and reduce costs, since you will not need to purchase a switch and serial device server separately.

### Supports the Full Range of NPort 5000 Series Device Server Functions

The NPort S8000 series supports the complete array of NPort 5000 series device server functions. You can network your existing serial devices by connecting up to 4 serial devices through Ethernet ports,

with only basic configuration required. In addition, data transmission between the serial and Ethernet interfaces is bi-directional.

### Full-Function Managed Ethernet Switch

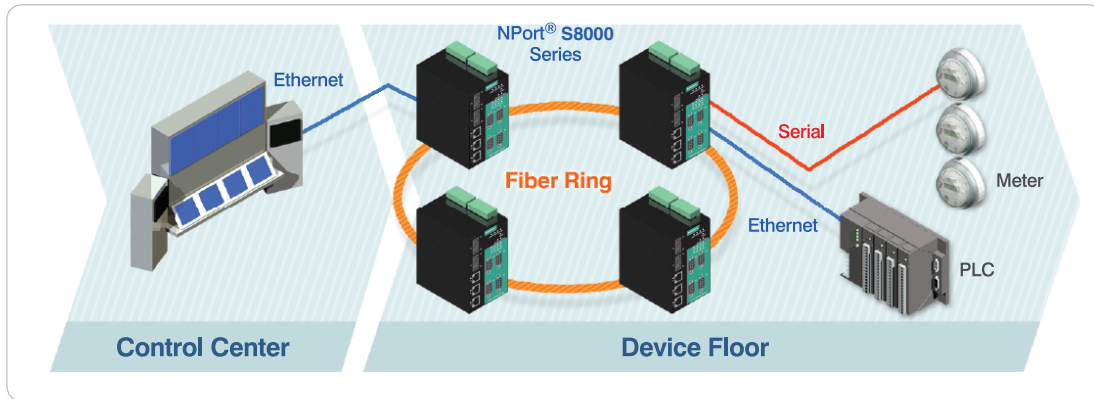

The NPort S8000 series has a built-in full-function managed Ethernet switch that supports QoS, IGMP-snooping/GMRP, VLAN, Port Trunking, SNMPv1/v2c/v3, and IEEE 802.1X, allowing you to handle virtually any kind of application. Ethernet redundancy, which

is used to increase the reliability and availability of your industrial Ethernet network, is provided by Moxa's Turbo Ring and Turbo Chain technology (recovery time < 20 ms) or RSTP/STP (IEEE 802.1w/D).

### Ring Redundancy at the Device Level

Device-level communication networks for industrial automation are very critical since they are used to control and monitor device processes. The reliability of these communications depends on ring redundancy at the device level, which is designed to provide fast network fault detection and reconfiguration in order to support the most demanding control applications. The NPort S8000 series integrates a full function NPort device server with an industrial switch

to carry serial and Ethernet devices at the same time. In addition, the NPort S8000 can also achieve ring redundancy with standard STP/RSTP and Moxa's proprietary Turbo Ring or Turbo Chain 2 redundancy protocols. This all-in-one design can be used to optimize and simplify your device network and enhance reliability.

## Rugged Design with Complete Protection

### UL 508 Safety

The NPort S8000 series complies with the UL 508 standard, which covers safety requirements for industrial control equipment.

### Level 4 ESD (NPort S8458 only)

The NPort S8000 series supports high level, 8/15 kV, ESD protection to prevent damage from static electricity.

### Full Surge Protection (NPort S8458 only)

The NPort S8000 series is equipped with surge protection for power, Ethernet interface, and serial interface to protect against voltage spikes.

### 2 kV Serial Isolation (NPort S8455I only)

Each serial port is protected by 2 kV of isolation protection to guard against harmful currents.
