## CUSTOMER:

RedCats  
2300 Southeastern Ave  
Indianapolis, IN 46201

RedCats, a distribution center located in Indianapolis, Indiana, operates three shifts per day and had concerns regarding the safety of their employees who arrive or depart in darkness. Their goals with a retrofit lighting installation were to boost light levels, reduce safety risks and increase fixture reliability within the parking and walking areas without increasing monthly energy costs.

For this installation, RedCats selected Horner Lighting Group's A200 area light, featuring the adjustable wing, to replace the original 470 watt metal halide fixtures. After installation, measured average light levels were increase four times into the areas previously flagged by RedCats as safety and security risks. Additionally, annual energy costs were cut in half as a result of the increased efficiency received with the A200 fixtures.
