IVC Introduces Tamper Resistant IP Wedge Camera

Watertown, MA – January 27, 2005 – In response to rapidly growing market segments, IVC has developed a tamper-resistant IP camera that fills needs previously unmet by the industry.

IVC's fixed IP wedge camera is ruggedly designed to withstand tampering, and is ideal for areas where that may be a problem. Included in this market are schools, which represent the fastest growing segment for surveillance cameras, as well as other large markets such as prisons, dormitories, ships and apartments.

IVC's Tamper-Resistant Wedge IP Camera

IVC's Vice-President of Marketing, Gary George, commented, "We developed this product to put an IP camera on the market in locations where standard, more delicate models are not appropriate. We specifically addressed design requirements that would be beneficial in a school environment, but the tamper-resistant aluminum wedge design is ideal for a wide range of facilities."

The durability of this camera makes it an attractive investment for many locations that are at risk for vandalism and can create a rapid payback in reduced maintenance costs.

Based in Watertown, Massachusetts, IVC is a manufacturer/integrator of IP-based video systems and a developer of advanced software for managing networks of video cameras. Their video systems are used in a variety of applications by companies of all sizes. IVC offers a range of IP cameras including pan-tilt zoom, fixed, remote zoom and varifocal (manual zoom) cameras.
