Industrial Video & Control Co. introduces EMI-hardened camera enclosures

Industrial Video & Control soon to ship certified camera enclosures suitable for use in environments with the potential for electromagnetic interference.

Newton, MA – August 7, 2006 – Industrial Video & Control Co. (IV&C), a leading provider of networked-based video surveillance systems, announced today that it has introduced a new line of camera enclosures, successfully tested for resistance to high level EMI exposure.

IV&C is a manufacturer of IP-based cameras and developer of advanced software for managing networks of video systems. “We have extensive experience with deploying shipboard systems,” states Norman Fast, president of IV&C. “These applications and others potentially expose our cameras to high levels of EMI, particularly from shipboard radar. After a year of engineering and testing, we can now deliver video cameras that meet military standards and ensure proper operation under these conditions.”

IV&C believes this is the first commercially available COTS (Commercial off the shelf) video camera enclosure to meet the EMI resistance requirements of MIL-STD-461E. The company worked with a nationally recognized testing laboratory to expose the new enclosure to EMI levels as high as 200 volts per meter through a wide range of frequencies.

IV&C camera offering includes pan-tilt zoom, fixed, zoom-only and varifocal (manual zoom) cameras. IV&C manufactures cameras that are suitable for the harshest weather and environmental conditions; IV&C cameras have been certified for use in Class I Div II (inherently dangerous) environments. IV&C camera systems combine their camera products and state-of-the-art management software. Their Relay Server and View Station software packages enable remote viewing and control of video as well as management of all aspects of your surveillance systems. IV&C software also facilitates integration of video into 3rd party applications.

The EMI-hardened enclosures enable IV&C to offer a variety of camera solutions that meet MIL-STD-461E. The IV&C enclosures provide EMI shielding to >200 V/m through the frequency range of 2MHz to 40Ghz. Initial products using this technology are scheduled for shipment in Q4 2006. Cameras will be available in a variety of fixed and pan/tilt/zoom configurations.

About Industrial Video & Control Company

Based in Newton, MA, IV&C delivers a broad range of quality IP based video systems to industrial, commercial and military applications. Their standards-based software, which delivers quality video to PCs and other client devices over a network, is designed to be scalable and easily integrate with third party software. A key strength of IV&C is its ability to develop cameras, enclosures, and software to meet demanding customer requirements.
