Industrial Video & Control Co. becomes Wonderware Registered ISV

Relay Server ActiveX controls add video capability to Wonderware's SCADA software.

Newton, MA – August 7, 2006 – Industrial Video & Control Co. (IV&C), a leading provider of networked-based video surveillance systems, announced today that it has become a Wonderware Registered Independent Software Vendor (ISV).

Wonderware is a leading supplier of easy to use and easy to integrate industrial automation and information software. Wonderware® software not only helps to automate plant operations but it enables managers to make intelligent plant decisions in real time. According to their website, Wonderware has approximately 325,000 software licenses in approximately 100,000 plants worldwide, which is about 30 percent of the world's 335,000 plants with 20 or more employees.

IV&C is a manufacturer of IP-based cameras and developer of advanced software for managing networks of video systems. "To meet the demand from SCADA system integrators, we created a capability to import video into applications such as those from Wonderware," states Norman Fast, president of IV&C. "We realized our SCADA customers were almost exclusively using Wonderware, so it made sense to formalize our relationship."

The ability to integrate various components of a security or process monitoring system under a single interface is key for most SCADA applications. Since video provides the "eyes" for the application, it is often desirable to view video along with the system status and controls. IV&C's ActiveX controls provide the facility to do this seamlessly. Using the IV&C ActiveX controls, all or part of the Relay Server view panel can be embedded into a Wonderware applications window. This provides the flexibility to use IV&C video controls or to design custom buttons to operate cameras, view, and/or save video. The IV&C ActiveX component is a small file that integrates easily over any network. The solution developer need only use IV&C's built-in dialog box to configure the component or choose to build a customized interface via simple scripts.

Fast continues, " As a recognized Wonderware ISV, we are now exposed to more customers who wish to add video capabilities to process control applications. Additionally, we are likely to come across opportunities that require custom features; something we are willing and able to add. We expect our partnership with Wonderware to be a rewarding one."

About Industrial Video & Control Company
Based in Newton, MA, IV&C delivers a broad range of quality IP based video systems to industrial, commercial and military applications. Their standards-based software, which delivers quality video to PCs and other client devices over a network, is designed to be scalable and easily integrate with third party software. A key strength of IV&C is its ability to develop cameras, enclosures, and software to meet demanding customer requirements.
