Industrial Video & Control Co. introduces 802.11b/g cameras

Industrial Video & Control integrates PePWave radios into selected outdoor cameras.

Newton, MA – January 2, 2008 – Industrial Video & Control Co. (IVC), a leading provider of networked-based video surveillance systems, announced today that it has developed a line of Wi-Fi Mesh compatible cameras using integrated 802.11b/g radios from PePWave. The PePWave Wi-Fi radio has undergone extensive compatibility testing for vendor certified interoperability on today's most popular Mesh networks. These outdoor cameras provide a cost-effective means of quickly implementing video applications without incurring the expense of deploying a wired network infrastructure. Besides power to the camera, all that is required is a compatible wireless access point within range of the camera. Cameras can be deployed 800 to 1600 feet from an access point. This solution is ideal for temporary surveillance deployments or installations where installing a wired infrastructure to support cameras is not a desirable option.

IVC is a manufacturer of IP-based cameras and developer of advanced software for managing networks of video systems. "We are seeing an increasing demand for wireless camera systems," states Norman Fast, president of IVC. "Customers deploying video surveillance systems want the flexibility and scalability of IP-cameras and wireless technology. PePWave's rugged, powerful radios enabled us to provide a cost-effective, high-quality solution that customers expect from IVC."

PePWave is also seeing a rising popularity in IP video surveillance on Wi-Fi networks. "We are excited to work with IVC, their new Wi-Fi Mesh-capable cameras are a great fit for the needs of many cities deploying networks," said Alex Chan, Managing Director for PePWave.

IVC's camera offering includes pan-tilt zoom, fixed, zoom-only and varifocal (manual zoom) cameras. IVC manufactures cameras that are suitable for the harshest weather and environmental conditions, as well as cameras that have been certified for use in inherently dangerous environments. IVC camera systems combine camera products and state-of-the-art management software. Their Relay Server and View Station software packages enable remote viewing and control of video as well as management of all aspects of your surveillance systems. IVC software also facilitates integration of video into 3rd party applications.

About Industrial Video & Control Company

Based in Newton, MA, IVC delivers a broad range of quality IP based video systems to industrial, commercial and military applications. Their standards-based software, which delivers quality video to PCs and other client devices over a network, is designed to be scalable and easily integrate with third party software. A key strength of IVC is its ability to develop cameras, enclosures, and software to meet demanding customer requirements.

About PePWave

PePWave is the proven market leader in delivering broadband devices and integrated solutions for citywide Wi-Fi Broadband. Headquartered in Hong Kong, PePWave's products have been deployed by service providers, public safety agencies, city governments and enterprise customers around the world. As an innovative creator of technology solutions, PePWave operates globally with offices in North America and Asia in cooperation with distributors, system integrators, OEMs, and strategic alliance partners
