: Introduction

V2616 Series embedded computers are based on the Intel Core 2 Duo x86 processor, and feature 2 RS-232/422/485 serial ports, dual LAN ports, and 3 USB 2.0 hosts. V2616 computers also provide VGA and DVI-I outputs, and are also compliant with the essential sections of EN 50155 covering operating temperature, power input voltage, power surges, ESD, and vibration, making them particularly well-suited for railway and industrial applications.
The V2616's CompactFlash socket and internal SATA II storage tray provide these computers with the reliability needed for industrial applications that require data buffering and storage expansion. Most importantly, the V2616 computers come with 2 removable slots for inserting additional storage media, such as hard disks or SSD drives, and can offer RAID 0 and RAID 1 functions for data reliability.
The V2616 series come pre-installed with Linux or Windows Embedded Standard 2009 to provide programmers with a familiar environment in which to develop sophisticated, bug-free application software at a low cost.
