

Read Profinet Records from PNOZ m B1 with TIA-Portal

PILZ
THE SPIRIT OF SAFETY

Product

Type: Small controllers
Name: PNOZ m B1, Profinet
Manufacturer: Pilz GmbH & Co. KG, Safe Automation

Document

Release Number: NN
Release Date: 17 August 2023

Important Note

Prerequisite is Application Note 1003896-EN-xx

Document Revision History

Release	Date	Changes	Chapter
01	2023-08-17	Creation	all

Validity of Application Note

This present Application Note is valid until a new version of the document is published. This and other Application Notes can be downloaded in the latest version and for free from www.pilz.com. For a simple search, use our [content document \(1002400\)](#) or the [direct search function](#) in the download area.

The [Pilz newsletter](#) is free of charge and keeps you up to date on all the latest issues and trends in safe automation.

Exclusion of Liability

We have taken great care in compiling our application note. It contains information about our company and our products. All statements are made in accordance with the current status of technology and to the best of our knowledge and belief.

While every effort has been made to ensure the information provided is accurate, we cannot accept liability for the accuracy and entirety of the information provided, except in the case of gross negligence. In particular, all information on applicable standards, safety-related classifications and time characteristics should be viewed as provisional. In particular it should be noted that statements do not have the legal quality of assurances or assured properties.

We are grateful for any feedback on the contents.

August 2023

All rights to this publication are reserved by Pilz GmbH & Co. KG.

We reserve the right to amend specifications without prior notice. Copies may be made for the user's internal purposes.

The names of products, goods and technologies used in this manual are trademarks of the respective companies. Please note the current information about the products, their licenses and registered trademarks in the documents listed in [Chapter 1 Useful documentation \[6\]](#).

Industrial Security

To secure plants, systems, machines and networks against cyberthreats it is necessary to implement (and continuously maintain) an overall [Industrial Security concept](#) that is state of the art.

Perform a risk assessment in accordance with VDI/VDE 2182 or IEC 62443-3-2 and plan the security measures with care. If necessary, seek advice from [Pilz Customer Support](#).

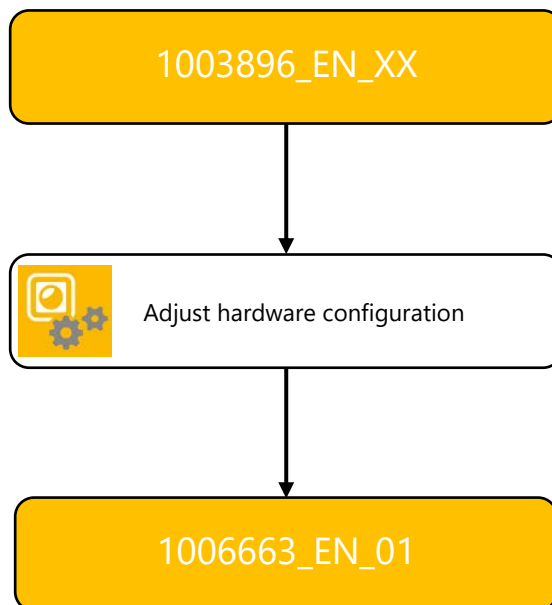

Documentation Guide

To handle this Application Note it is assumed that a Profinet connection between the base unit and the Siemens F-CPU has already been established. This procedure is explained in more detail in Application Note 1003896-EN-XX using a PNOZ m B0. In this Application Note, on the other hand, a PNOZ m B1 is used.

INFORMATION

For process data and device connections, Profinet records can only be used with a PNOZ m B1 base unit, unlike described in Application Note 1003896-EN-XX (see [Chapter 2 Used hardware and software \[7\]](#)). The hardware configuration of the PNOZmulti program should be adapted accordingly. This is not necessary for reading out the device data and the project name, as described in this Application Note.

Abbreviations

Abbreviation / term	Description	Source

Definition of Symbols

- ▶ Information that is particularly important is identified as follows:

CAUTION!

This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

NOTICE

This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

INFORMATION

This gives advice on applications and provides information on special features.

2.3 Structure of the application (schematic)

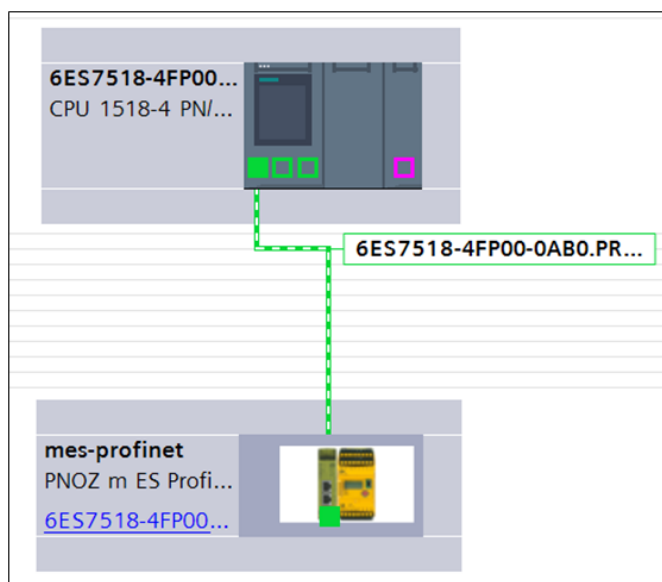

Figure 1: Application – Structure of the hardware (schematic)

3 Application description

The AN show how the device and project data can be read from a PNOZmulti 2 system using the Profinet records. A Siemens S7-1500 controller is used as Profinet master.

- ▶ Configure a simple Profinet records data transfer in TIA Portal (see [Chapter 4](#)) based on Application Note 1003896-EN-XX. This is a prerequisite for further processing of the AN.

The basic hardware configuration for the Siemens PLC and the PNOZmulti is not part of this documentation. The procedure for successful basic configuration is shown step-by-step, mostly in pictures.

NOTICE

- ▶ A detailed explanation of safety functions used in the failsafe application and its evaluation regarding functional safety are not a part of this document.
- ▶ This document only describes the procedure for use of PNOZ multi 2 system with the order number 772101 and is not intended as a technical documentation for general use of SIMATIC STEP 7 Professional.

3.1 Prerequisites for the use of records

Data ranges:

	PNOZ m B0	PNOZ m B1
Process data for base unit and expansion modules:  82]		
Base unit	✓	✓
Expansion modules right 1 ... 6	✓	✓
Expansion modules right 7 ... 12	-	from V1.1
Expansion modules left 1 ... 4	✓	✓
ST expansion modules	-	from V1.1 ^[1]
▶ State of safe inputs i0 ... i31	✓	✓
▶ State of safe outputs o0 ... o31	✓	✓
▶ Status of system LEDs	✓	✓
▶ Status of IO LEDs	✓	✓
▶ Status of the expanded inputs i32 ... i127 when using the module PNOZ m EF SafetyNET	from V2.3	from V1.2
▶ Advanced data	from V2.3 ^[2]	from V1.1 ^[2]
Process data: Fieldbus and communication module	✓	✓
▶ State of virtual standard inputs i0 ... i127	✓	✓
▶ State of virtual standard outputs o0 ... o127	✓	✓
▶ Status of system LEDs	✓	✓
Connected devices		
▶ 1st device connection	-	from V1.5 ^[3]
▶ 2nd ... 8th device connection	-	from V1.6 ^[3]
Diagnostic words	✓	✓
▶ Diagnostics	✓	✓
Enable elements	✓	-
▶ Element IDs	✓	-
Project data	✓	✓
▶ Check sums	✓	✓
▶ Date	✓	✓

	PNOZ m B0	PNOZ m B1
▶ Project name	✓	✓
Device data  132]		
Base unit	✓	✓
Expansion modules right 1 ... 6	✓	✓
Expansion modules right 7 ... 12	-	from V1.1
Expansion modules left 1 ... 4	✓	✓
ST expansion modules	-	from V1.1
▶ Product	✓	✓
▶ Firmware	✓	✓
▶ Operating hours	✓	✓

Figure 2: Prerequisites (Part 1) [p.80, Chapter 1.1 Nr.2]

[1] Minimum requirements for addressing the process data: ST expansion modules

Data	PNOZ m B1 V1.1
Tables	✓
Modbus Register	✓
SDOs	Fieldbus modules from V2.0
Profinet Records	
Ethernet IP instances	

[2] Minimum requirements for addressing the process data: Advanced data

Data	PNOZ m B0 V2.3	PNOZ m B1 V1.1
Tables	✓	✓
Modbus Register	PNOZ m ES ETH V1.1	✓
SDOs	Not supported	Fieldbus modules from V2.0
Profinet Records		
Ethernet IP instances		

[3] Minimum requirements for addressing the device connections

Data	PNOZ m B1 from V1.5
Tables	✓
Modbus Register	✓
SDOs	Fieldbus modules from V2.0
Profinet Records	
Ethernet IP instances	

Figure 3: Prerequisites (Part 2) [p.81, Chapter 1.1 Nr.2]

3.2 What are Profinet Records?

Record data are used to perform acyclic data exchange.

This includes the following information:

- Reading out diagnostic information
- Reading out identification information according to the "Identification and Maintenance (I&M) Functions".
- Reading back IO data

4 Application task

In the following instruction, the material number and the project name of the base unit are to be read out.

Using the "Communication interfaces" documentation from [Chapter 1.1 Documentation from Pilz GmbH & Co. KG \[6\]](#), several pieces of information must be determined.

- ▶ The record index is required once.

Profinet Records

Device data		Profinet	
Info	Byte	Record	Byte
Product	0 ... 11	40	0 ... 11
Firmware	12 ... 19	40	12 ... 19
Operating hours	24 ... 27	40	24 ... 27

Figure 4: Profinet Records index determination [p.134]

- ▶ In addition, the number and position of the bytes are required, which finally output the product number.

Product

Byte	Information
0	Product number, e.g. 772 100: 000BC804 (hex) ▶ Byte 0: 00 ▶ Byte 1: 0B, ▶ Byte 2: C8, ▶ Byte 3: 04
1	
2	
3	
4	Serial number, e.g. 123 456: 0001E240 (hex) ▶ Byte 4: 00 ▶ Byte 5: 01 ▶ Byte 6: E2, ▶ Byte 7: 40
5	
6	
7	
8	Device type, e.g. PNOZ m B0: 0060 (hex) ▶ Byte 8: 00 ▶ Byte 9: 60 Device type, e.g. PNOZ m B1: 0061 (hex) ▶ Byte 8: 00 ▶ Byte 9: 61
9	
10	
10	Unit version 20: 14 (hex) ▶ Byte 10: 00 ▶ Byte 11: 14
11	

Figure 5: Profinet Records Byte determination [p.132]

- ▶ In the TIA Portal a RDREC block is created (function is explained in the screenshot).
- ▶ For this purpose the OB1 is opened.

Figure 6: Open OB1

- ▶ Then the RDREC module can be searched for and inserted using the search function.

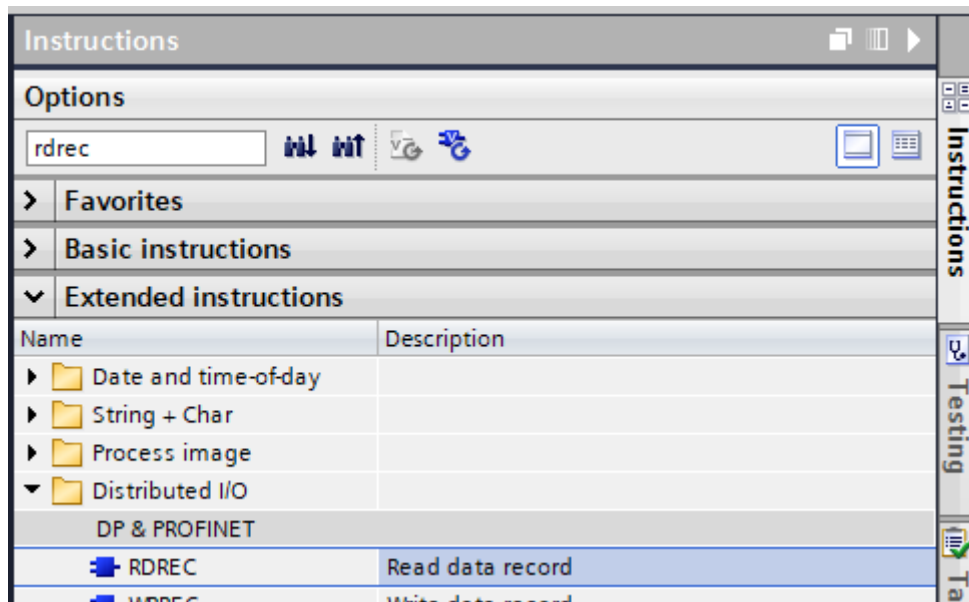

Figure 7: RDREC in Library

- ▶ This is a Siemens block that does not have to be adapted for this application. A more detailed description can be found in the online help.

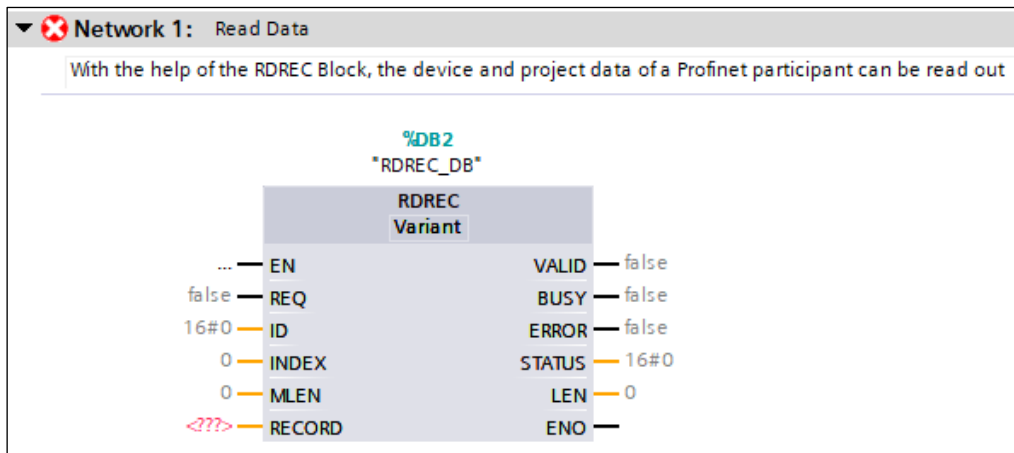

Figure 8: Create RDREC block

▶ A global DB must also be created, which contains the required variables.

Figure 9: Create data block

Static			
start	Bool	true	
ident	HW_IO	271	
index	DInt	40	
maxLength	DInt	0	
valid	Bool	false	
busy	Bool	false	
error	Bool	false	
status	DWord	16#0	
recLength	DInt	0	
recordData	Array[0..35] of Byte		

Figure 10: Create variables in the data block

- ▶ The following variables get a start value:
 - start = true
 - The RDREC block should be constantly read the Records of PNOZmulti.
 - Ident 271
 - The ident variable is the hardware ID of the Profinet participant and can be found in TIA-Portal via "PLC tags" → "System constants".

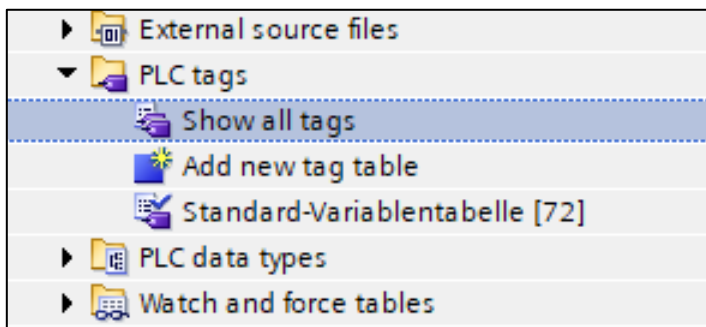

Figure 11: Show all variables

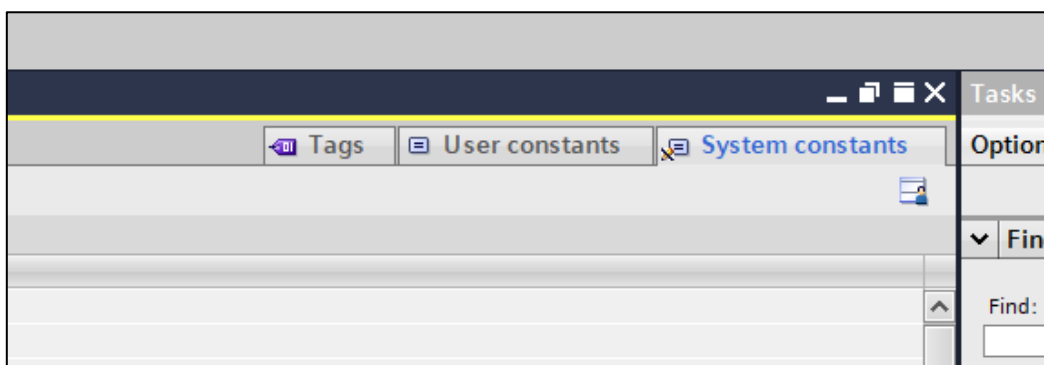

Figure 12: Open "System constants"

59	mes-profinet~PN-IO	Hw_Interface	268
60	mes-profinet~PN-IO~Port_1_-_RJ45	Hw_Interface	269
61	mes-profinet~PN-IO~Port_2_-_RJ45	Hw_Interface	270
62	mes-profinet~Head	Hw_SubModule	271
63	mes-profinet~4_Input_Bytes__Bits...	Hw_SubModule	272
64	mes-profinet~4_Input_Bytes__Bits...	Hw_SubModule	273
65	mes-profinet~4_Input_Bytes__Bits...	Hw_SubModule	274
66	mes-profinet~4_Input_Bytes__Bits...	Hw_SubModule	275
67	mes-profinet~4_Output_Bytes__Bi...	Hw_SubModule	276
68	mes-profinet~4_Output_Bytes__Bi...	Hw_SubModule	277
69	mes-profinet~4_Output_Bytes__Bi...	Hw_SubModule	278

Figure 13: HW-ID determine

- index = 40
 - index is the record index already determined.
 - maxLength = 0
 - maxLength specifies the maximum length to be read back. If this is set to 0, the controller reads back the complete data set.
- The input and output data of the RDREC block must be assigned accordingly and then the program can be loaded onto the controller.

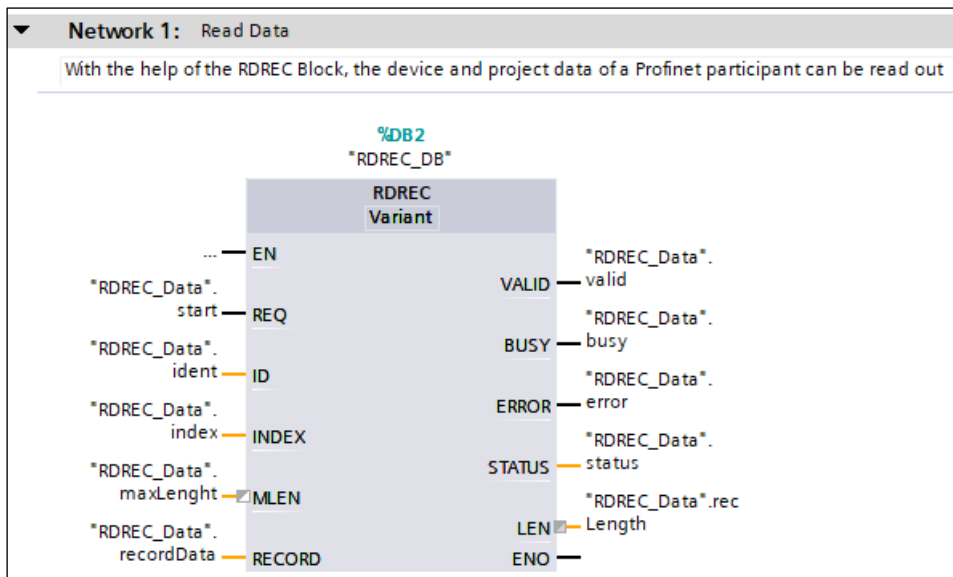

Figure 14: Variable assignment RDREC

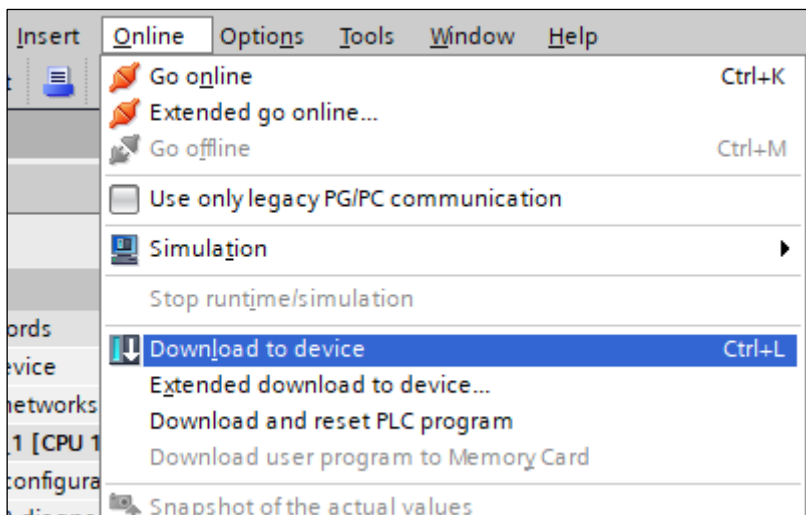

Figure 15: Download to device

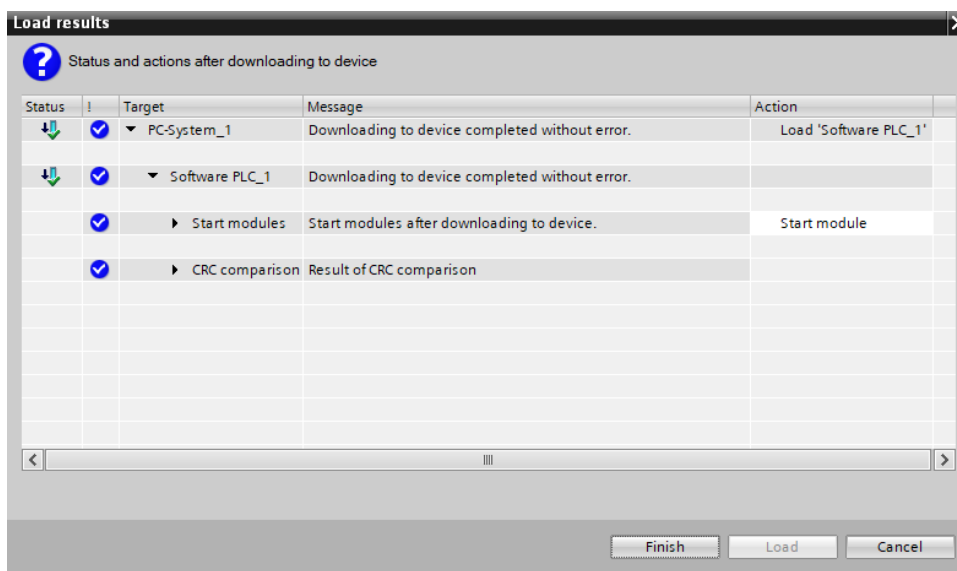

Figure 16: Load configuration into the device

► Create online connection

Figure 17: Create online connection

- ▶ "Monitor all" can now be selected in the database.

Figure 18: Activate "Monitor all"

- ▶ The records read out are now stored in the "recordData" array. The position and number of bytes were identified in [Figure 5: Profinet Records Byte determination \[p.132\] \[11\]](#).

recordData	Array[0..35] of Byte		
recordData[0]	Byte	16#0	16#00
recordData[1]	Byte	16#0	16#0B
recordData[2]	Byte	16#0	16#C8
recordData[3]	Byte	16#0	16#05

Figure 19: Array "recordData" with product number

If you put the hex values together and convert them into decimal numbers, you get from 000BC805 the value 772101, which corresponds to the product number of the base unit.

- ▶ To read out the project name, only the index must be changed to 38.

Profinet records

Process data		Profinet	
Information	Byte	Record	Byte
Check sums	0 ... 3	37	0 ... 3
Date	12 ... 23	37	12 ... 23
Project name	24 ... 57	38	0 ... 33

Figure 20: Record index for project name [p.131 Chapter 1.1 Nr.2]

- ▶ With help of a Unicode Chart always 2 byte can be read together and translate to a character.

recordData	Array[0..35] of Byte		
recordData[0]	Byte	16#0	16#00
recordData[1]	Byte	16#0	16#50
recordData[2]	Byte	16#0	16#00
recordData[3]	Byte	16#0	16#72
recordData[4]	Byte	16#0	16#00
recordData[5]	Byte	16#0	16#6F

Figure 21: Array "recordData" with project name

U+004F	O	
U+0050	P	
U+0051	Q	

Figure 22: Unicode 0050 results in "P"

So the first 6 bytes in [Figure 21: Array "recordData"](#) with project name results in „Pro“.

- ▶ The watch table can also be used to output the bytes as characters. For this purpose, a new watch table must be created.

Figure 23: Create new watch table

- ▶ The variable name is now entered here with [1] as the index in the display format "Character"

Name	Address	Display format
"RDREC_Data".recordData[1]		Character

Figure 24: Create variable in watch table

- ▶ This field can be dragged down with the dot in the lower right corner to continue the row.

Figure 25: Dot in the corner

- ▶ All lines with even index can then be deleted. The "Character" field can also be pulled down so that all variables are displayed as "Character", as shown in [Figure 27 \[19\]](#).
- ▶ With a click on „Monitor all“ the name of the project is shown.

Figure 26: Button "Monitor all"

"RDREC_Data".recordData[1]		Character	'P'
"RDREC_Data".recordData[3]		Character	'r'
"RDREC_Data".recordData[5]		Character	'o'
"RDREC_Data".recordData[7]		Character	'f'
"RDREC_Data".recordData[9]		Character	'i'
"RDREC_Data".recordData[11]		Character	'n'
"RDREC_Data".recordData[13]		Character	'e'
"RDREC_Data".recordData[15]		Character	't'
"RDREC_Data".recordData[17]		Character	'_'
"RDREC_Data".recordData[19]		Character	'P'
"RDREC_Data".recordData[21]		Character	'N'
"RDREC_Data".recordData[23]		Character	'O'
"RDREC_Data".recordData[25]		Character	'Z'
"RDREC_Data".recordData[27]		Character	'_'
"RDREC_Data".recordData[29]		Character	'm'
"RDREC_Data".recordData[31]		Character	'B'

Figure 27: Program name in variable

- ▶ In this case the program name is „Profinet_PNOZ_mB1“.
