Introduction

Validity of documentation

This documentation is valid for the product PDP20 F 4 mag. It is valid until new documentation is published.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

Definition of symbols

Information that is particularly important is identified as follows:

DANGER!

This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

WARNING!

This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

CAUTION!

This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

NOTICE

This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

INFORMATION

This gives advice on applications and provides information on special features.

Safety

Intended use

The sensor interface PDP20 F 4 mag enables up to 4 sensors to be connected in series, and connection to an evaluation device.

Permitted sensors are sensors with a N/O / N/O combination and the Pilz sensors listed in the section entitled "Permitted sensors from Pilz".

The sensor interface meets the requirements in accordance with:

- ▶ EN 60204-1
- ▶ EN 60947-5-3
- EN 62061: up to max. SIL CL 3
- EN ISO 13849-1: up to max. PL e

If multiple sensor interfaces PDP20 F 4 mag are connected in series, 3 additional sensors per sensor interface may be connected in series.

Improper use

The following is deemed improper use in particular

- Any component, technical or electrical modification to the product,
- Use of the product outside the areas described in this operating manual,
- ▶ Use of the product outside the technical details (see Technical details [↓↓ 14]).

NOTICE

EMC-compliant electrical installation

The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

Safety regulations

Safety assessment

Before using a device, a safety assessment in accordance with the Machinery Directive is required.

The product as an individual component fulfils the functional safety requirements in accordance with EN ISO 13849 and EN 62061. However, this does not guarantee the functional safety of the overall plant/machine. To achieve the relevant safety level of the overall plant/ machine's required safety functions, each safety function needs to be considered separately.

Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by persons who are competent to do so.

A competent person is a qualified and knowledgeable person who, because of their training, experience and current professional activity, has the specialist knowledge required. To be able to inspect, assess and operate devices, systems and machines, the person has to be informed of the state of the art and the applicable national, European and international laws, directives and standards.

It is the company's responsibility only to employ personnel who

- > Are familiar with the basic regulations concerning health and safety / accident prevention,
- Have read and understood the information provided in the section entitled Safety
- Have a good knowledge of the generic and specialist standards applicable to the specific application.

Warranty and liability

All claims to warranty and liability will be rendered invalid if

- > The product was used contrary to the purpose for which it is intended,
- > Damage can be attributed to not having followed the guidelines in the manual,
- > Operating personnel are not suitably qualified,
- Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

Disposal

- ▶ In safety-related applications, please comply with the mission time T_M in the safety-related characteristic data.
- When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

For your safety

The unit meets all the necessary conditions for safe operation. However, please note the following:

Note for overvoltage category III: If voltages higher than low voltage (>50 VAC or >120 VDC) are present on the unit, connected control elements and sensors must have a rated insulation voltage of at least 250 V.

Unit features

- Connection of 4 sensors with a N/O / N/O combination
- 2 safety outputs
- ▶ 1 signal output
- LED display for:
 - State of the outputs
 - State of the inputs
 - Operational readiness
- Multiple PDP20 F 4 mag may be connected in series
- Plug-in connection terminals:

Either spring-loaded terminal or screw terminal available as an accessory (see order reference [2] 17])

Block diagram

Function description

The inputs of the PDP20 F 4 mag are AND-linked. The result of the logic AND operation is expressed via safety outputs O0 and O1.

A signal output (SO) indicates the state of the sensors.

Safety outputs

- There is a high signal at safety outputs O0, O1 when all the input circuits I10 ... I41 are closed.
- If at least one of the input circuits is open or a sensor is partially operated, the safety outputs will switch to a low signal.

Signal Output

- There is a high signal at the signal output SO when the connected sensors are operated (N/O contact closed).
- If at least one of the sensors is not operated or is partially operated, the signal output SO will switch to a low signal.

Detection of shorts across contacts

2 test pulse outputs T0 and T1 enable shorts across contacts to be detected at the inputs. The two test pulse outputs are permanently assigned to the inputs. If the test pulses are swapped or there is a short circuit at the inputs, the device switches off the safety outputs safely (low signal) and registers an error.

Series connection

The safety outputs of a PDP20 F 4 mag may be connected to the cascading inputs I40 - I41 on another PDP20 F 4 mag. 3 additional sensors may be AND-linked via this device. In the event of a short across the contacts, the safety outputs will be switched off safely (low signal).

Input SI

The input SI is reserved for future functions and may not be used.

Legend

- ▶ ①: Single connection with Unit 1
- ②: Series connection of Unit 1 and Unit 2
- Power: Supply voltage
- Unit 1, I10 ... I41: Input circuits of Unit 1
- Unit 1, O0/O1: Safety outputs of Unit 1
- Unit 2, I40- I41: Cascading input of Unit 2
- Unit 2, I10 ... I31: Input circuits of Unit 2
- Unit 2, O0/O1: Safety outputs of Unit 2
- ▶ t₁: Max. processing time for input when signal changes from "0" to "1"
- ▶ t₂: Typ. switch-on delay
- ▶ t₃: Max. processing time for semiconductor output when signal changes from "1" to "0"

Installation

- The unit should be installed in a control cabinet with a protection type of at least IP54.
- ▶ Use the notch on the rear of the unit to attach it to a DIN rail (35mm).
- When installed vertically: Secure the unit by using a fixing element (e.g. retaining bracket or end angle)
- > Push the device upwards or downwards before lifting it from the DIN rail.

Wiring

Please note:

- ▶ Information given in the "Technical details [□ 14]" must be followed.
- Calculation of the max. cable length I_{max} in the input circuit:

$$I_{max} = \frac{R_{lmax}}{R_l / km}$$

 R_{imax} = max. overall cable resistance (see Technical details [44]) R_i / km = cable resistance/km

- Use copper wiring with a temperature stability of 75 °C.
- To prevent EMC interferences (particularly common-mode interferences) the measures described in EN 60204-1 must be executed. This includes the separate routing of cables of the control circuits (input, start and feedback loop) from other cables for energy transmission or the shielding of cables, for example.
- ▶ The power supply must comply with the regulations for extra low voltages with protective electrical separation (SELV, PELV) in accordance with VDE 0100, Part 410.
- 1 wire may be connected per terminal. Use a terminal block if you need multiple connections per terminal.

Permitted sensors from Pilz

Preparing for operation Single connection

X1: Terminal block

Grey area: Control cabinet

NOTICE

- The test pulses are permanently assigned to the inputs (T0 to I10, I20, I30, I40 and T1 to I11, I21, I31, I41) and must be connected as shown in the wiring diagram.
- Unused inputs must also be connected to the assigned test pulse.

Series connection

X1, X2: Terminal block

Grey area: Control cabinet

NOTICE

- No sensor should be connected between safety outputs O0 and O1 of the first PDP20 F 4 mag and inputs I40 and I41 of the second PDP20 F 4 mag. With a series connection, only safety output O0/O1 may be connected to the cascading inputs I40 I41.
- The signal output SO indicates the state of the connected sensors.
 The state at input circuit I40 I41 is not considered.

Operation

NOTICE

The safety functions should be checked after initial commissioning and each time the plant/machine is changed. The safety functions may only be checked by qualified personnel.

When the supply voltage is applied, the device checks whether the device is operating as a stand-alone device or in series with another PDP20 F 4 mag.

The unit is ready for operation when the Power LED is permanently lit.

LEDs indicate the status and errors during operation:

-×-	LED on
-X-	LED on

LED flashes

LED off

Status indicator

-)0(O0 or O1
•	High signal at the safety outputs O0 or O1
	Low signal at the safety outputs
-0-	110/11 or 120/21 or 130/31 or 140/41
	Input circuit is closed
•	110/11 or 120/21 or 130/31 or 140/41
	Input circuit is open

Fault indicator

•	Power
•	Supply voltage is missing, device is not ready for operation.
O	Power
	Run-up phase, device checks whether it's a single or series connection
O	O0 or O1
	Fault, short across contact or short circuit in the input or output circuit
	Remedy: Switch off supply voltage, rectify the fault and then switch the supply voltage back on again.
O	l10/11 or l20/21 or l30/31 or l40/41
·	Input circuit is partially operated
	Remedy: Open input circuit and close both N/O contacts again.

Stripping length with screw terminals 8 mm	Stripping length with screw terminals	8 mm

Mechanical data		
Conductor cross section with spring-loaded terminals: Flexible with/without crimp connector	0,2 - 2,5 mm², 24 - 12 AWG	
Spring-loaded terminals: Terminal points per connection	2	
Stripping length with spring-loaded terminals	9 mm	
Dimensions		
Height	98 mm	
Width	22,5 mm	
Depth	120 mm	
Weight	105 g	

Where standards are undated, the 2022-09 latest editions shall apply.

Safety characteristic data

NOTICE

You must comply with the safety characteristic data in order to achieve the required safety level for your plant/machine.

Operating mode	EN ISO 13849-1: 2015 PL	EN ISO 13849-1: 2015 Category	EN IEC 62061 SIL CL/ maximum SIL	EN IEC 62061 PFH _D [1/h]	EN/IEC 61511 SIL	EN/IEC 61511 PFD	EN ISO 13849-1: 2015 T _M [year]
2-channel	PL e	Cat. 4	SIL 3	3,44E-09	SIL 3	4,36E-05	20
Cascading inputs	PL e	Cat. 4	SIL 3	3,72E-09	SIL 3	5,84E-05	20

Explanatory notes for the safety-related characteristic data:

- Safety characteristic data in accordance with EN IEC 62061 and EN/IEC 61511 was calculated based on EN/IEC 61508.
- ▶ T_M is the maximum mission time in accordance with EN ISO 13849-1. The value also applies as the retest interval in accordance with EN/IEC 61508-6 and EN/IEC 61511 and as the proof test interval and mission time in accordance with EN IEC 62061.

All the units used within a safety function must be considered when calculating the safety characteristic data.

INFORMATION

A safety function's SIL/PL values are **not** identical to the SIL/PL values of the units that are used and may be different. We recommend that you use the PAScal software tool to calculate the safety function's SIL/PL values.

Order reference

Product

Product type	Features	Order no.
PDP20 F 4 mag	Sensor interface	773310

Accessories

Product type	Features	Order no.
Set spring terminals	1 set of spring-loaded terminals	751004
Set screw terminals	1 set of screw terminals	750004

EC declaration of conformity

This product/these products meet the requirements of the directive 2006/42/EC for machinery of the European Parliament and of the Council. The complete EC Declaration of Conformity is available on the Internet at www.pilz.com/downloads.

Authorised representative: Norbert Fröhlich, Pilz GmbH & Co. KG, Felix-Wankel-Str. 2, 73760 Ostfildern, Germany

UKCA-Declaration of Conformity

This product(s) complies with following UK legislation: Supply of Machinery (Safety) Regulation 2008.

The complete UKCA Declaration of Conformity is available on the Internet at www.pilz.com/ downloads.

Representative: Pilz Automation Technology, Pilz House, Little Colliers Field, Corby, Northamptonshire, NN18 8TJ United Kingdom, eMail: mail@pilz.co.uk

Pilz develops environmentally-friendly products using ecological materials and energy-saving technologies. Offices and production facilities are ecologically designed, environmentally-aware and energy-saving. So Pilz offers sustainability, plus the security of using energy-efficient products and environmentally-friendly solutions.
