Introduction

Validity of documentation

This documentation is valid for the product PNOZ XV3. It is valid until new documentation is published.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

Definition of symbols

Information that is particularly important is identified as follows:

DANGER!

This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

WARNING!

This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

CAUTION!

This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

NOTICE

This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

INFORMATION

This gives advice on applications and provides information on special features

Safety

Intended use

The safety relay PNOZ XV3 provides a safety-related interruption of a safety circuit.

The safety relay meets the requirements of EN 60947-5-1, EN 60204-1 and VDE 0113-1 and may be used in applications with

- ▶ E-STOP pushbuttons
- Safety gates
- Light grids and safety switches with detection of shorts across contacts

The following is deemed improper use in particular:

- Any component, technical or electrical modification to the product
- Use of the product outside the areas described in this manual
- Use of the product outside the technical details (see Technical details [44] 16]).

NOTICE

EMC-compliant electrical installation

The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

Safety regulations

Safety assessment

Before using a unit it is necessary to perform a safety assessment in accordance with the Machinery Directive.

Functional safety is guaranteed for the product as a single component. However, this does not guarantee the functional safety of the overall plant/machine. In order to achieve the required safety level for the overall plant/machine, define the safety requirements for the plant/machine and then define how these must be implemented from a technical and organisational standpoint.

Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by competent persons.

A competent person is someone who, because of their training, experience and current professional activity, has the specialist knowledge required to test, assess and operate the work equipment, devices, systems, plant and machinery in accordance with the general standards and guidelines for safety technology.

It is the company's responsibility only to employ personnel who:

- Are familiar with the basic regulations concerning health and safety / accident prevention
- Have read and understood the information provided in this description under "Safety"
- And have a good knowledge of the generic and specialist standards applicable to the specific application.

Warranty and liability

All claims to warranty and liability will be rendered invalid if

- > The product was used contrary to the purpose for which it is intended
- Damage can be attributed to not having followed the guidelines in the manual
- Operating personnel are not suitably qualified
- Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

Disposal

- In safety-related applications, please comply with the mission time T_{M} in the safety-related characteristic data.
- When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

For your safety

The unit meets all the necessary conditions for safe operation. However, please note the following:

Note for overvoltage category III: If voltages higher than low voltage (>50 VAC or >120 VDC) are present on the unit, connected control elements and sensors must have a rated insulation voltage of at least 250 V.

Unit features

- Positive-guided relay outputs:
 - 3 safety contacts (N/O), instantaneous
 - 2 safety contacts (N/O), delay-on de-energisation
- Connection options for:
 - E-STOP pushbuttons
 - Safety gate limit switches
 - Start buttons
 - Light grids and safety switches with detection of shorts across contacts
- Delay time fixed or selectable
- Possible to cancel delay time
- LED display for:
 - Supply voltage
 - Switch state of the safety contacts
 - Start circuit
- See order reference for unit types

Safety features

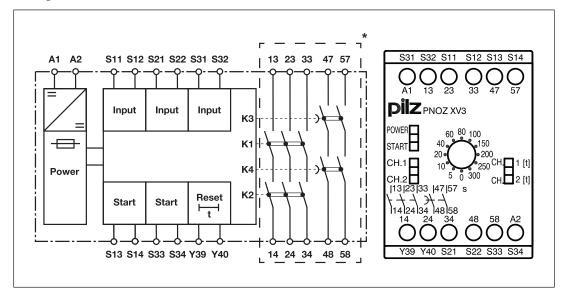

The safety relay meets the following safety requirements:

- The circuit is redundant with built-in self-monitoring.
- The safety function remains effective in the case of a component failure.
- The correct opening and closing of the safety function relays is tested automatically in each on-off cycle.

Block diagram/terminal configuration

Types: DC

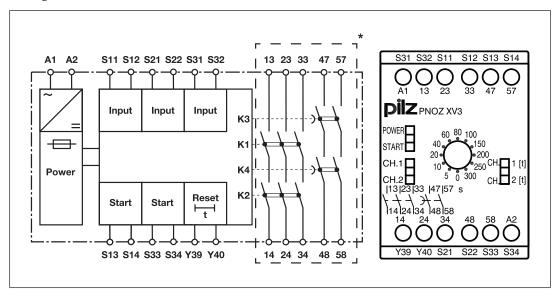

U_B: 24 DC; Order no. 774540, 774542, 774544, 774545, 774547, 774548

^{*}Insulation between the non-marked area and the relay contacts: Basic insulation (over-voltage category III), Protective separation (overvoltage category II)

Type: AC

U_B: 24 VAC; Order no. 774541

^{*}Insulation between the non-marked area and the relay contacts: Basic insulation (over-voltage category III), Protective separation (overvoltage category II)

Function Description

The safety relay PNOZ XV3 provides a safety-oriented interruption of a safety circuit. When supply voltage is supplied the "POWER" LED is lit. The unit is ready for operation when the reset circuit Y39-Y40 and the start circuit S13-S14 are closed.

- Input circuit is closed (e.g. E-STOP pushbutton not operated):
 - The "START" LED is lit.
 - The LEDs "CH.1", "CH.1 [t]", "CH.2" and "CH.2 [t]" are lit.
 - Safety contacts 13-14, 23-24, 33-34, 47-48 and 57-58 are closed. The unit is active.
 - The "START" LED goes out.
- Input circuit is opened (e.g. E-STOP pushbutton operated):
 - The LEDs "CH.1" and "CH.2" go out.
 - Safety contacts 13-14, 23-24 and 33-34 are opened redundantly.
 - Safety contacts 47-48 and 57-58 open after the delay time has elapsed.
 - The LEDs "CH.1 [t]" and "CH.2 [t]" go out.

Before the unit can be restarted, the delay time must have elapsed and the unit must again be ready for operation.

Set delay time:

On units with selectable delay time, the delay time of the safety contacts 47-48 and 57-58 can be set on the front of the unit using a screwdriver.

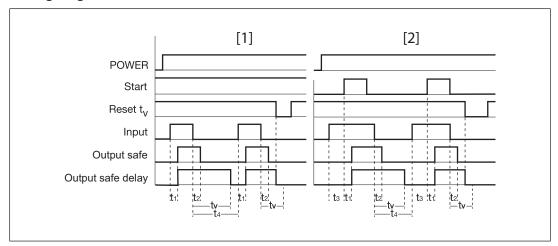

Reset function:

The delay time cycle can be ended prematurely by opening the reset circuit Y39-Y40. For this purpose, one N/C contact is connected between Y39-Y40 instead of a link.

Operating modes

- Single-channel operation: No redundancy in the input circuit, earth faults in the start and input circuit are detected.
- Dual-channel operation without detection of shorts across contacts: Redundant input circuit, detects PNOZ XV3
 - earth faults in the start and input circuit,
 - short circuits in the input circuit.
- Dual-channel operation with detection of shorts across contacts: Redundant input circuit, detects PNOZ XV3
 - earth faults in the start and input circuit,
 - short circuits in the input circuit,
 - Shorts across contacts in the input circuit.
- Automatic start: Unit is active once the input circuit has been closed.
- Monitored start: Unit is active once the input circuit is closed and once the start circuit is closed after the waiting period has elapsed (see Technical details [44 16]).
- Increase in the number of available contacts by connecting contact expander modules or external contactors/relays.

Timing diagram

Legend

- Power: Supply voltage
- > Start: Start circuit
- Reset t_v: Reset circuit
- Input: Input circuit
- Output safe: Safety contacts, instantaneous
- Output safe delay: Safety contacts, delayed
- [1]: Automatic start
- [2]: Monitored start
- t₁: Switch-on delay
- t₂: Delay-on de-energisation
- ▶ t₃: Waiting period with a monitored start
- t₄: Recovery time
- t_v: Delay time

NOTICE

At the latest, the delay-on de-energisation safety contacts open after the set delay time + 50 ms + 15% of the set value, even in the case of a component failure.

Installation

The unit should be installed in a control cabinet with a protection type of at least IP54.

- Use the notch on the rear of the unit to attach it to a DIN rail.
- Ensure the unit is mounted securely on a vertical DIN rail (35 mm) by using a fixing element (e.g. retaining bracket or an end angle).

Wiring

Please note:

- Information given in the "Technical details [16]" must be followed.
- Delivery status of units with screw terminals: Link between S11-S12 (dual-channel input circuit) and link between Y39-Y40 (reset circuit)
- Outputs 13-14, 23-24, 33-34 are instantaneous safety contacts, outputs 47-48, 57-58 are delay-on de-energisation safety contacts.
- To prevent contact welding, a fuse should be connected before the output contacts (see Technical details [16]).
- Calculation of the max. cable runs I_{max} in the input circuit:

$$I_{max} = \frac{R_{lmax}}{R_{l}/km}$$

 R_{lmax} = max. overall cable resistance (see Technical details [16]) R_{l} / km = cable resistance/km

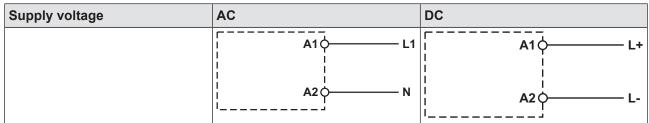

- Use copper wire that can withstand 60/75 °C.
- Sufficient fuse protection must be provided on all output contacts with capacitive and inductive loads.
- Do not switch low currents using contacts that have been used previously with high currents.
- When connecting magnetically operated, reed proximity switches, ensure that the max. peak inrush current (on the input circuit) does not overload the proximity switch.
- The power supply must comply with the regulations for extra low voltages with protective electrical separation (SELV, PELV) in accordance with VDE 0100, Part 410.
- Ensure the wiring and EMC requirements of IEC 60204-1 are met.

Important for detection of shorts across contacts:

As this function for detecting shorts across contacts is not failsafe, it is tested by Pilz during the final control check. If there is a danger of exceeding the cable length, we recommend the following test once the unit is installed:

- 1. Unit ready for operation (output contacts closed)
- 2. Short circuit the test terminals S22, S32 for detecting shorts across the inputs.
- 3. The unit's fuse must be triggered and the output contacts must open. Cable lengths in the scale of the maximum length can delay the fuse triggering for up to 2 minutes.
- Reset the fuse: Remove the short circuit and switch off the supply voltage for approx. 1 minute.

Preparing for operation

		<u></u>
Input circuit	Single-channel	Dual-channel
E-STOP without detection of shorts across contacts	S12 0 S12 0 S21 S11 0 S22 S32 0 S31 0	S11 0 S1 7
E-STOP with detection of shorts across contacts		S22 O S1 Tyr S22 O S11 S11 S32 O S12 S12 S31 O S21 O S
Safety gate without detection of shorts across contacts	S12 0 S1 S12 0 S1 S12 0 S1 S12 0 S1 S12 0 S1 S12 0 S1	S11 O S1 S2 S12 S22 S12 S32 O S32 O
Safety gate with detection of shorts across contacts		S31 \$ S2 \$ S1 \$ S2 \$ S12 \$ S22
Light guard or safety switch, detection of shorts across contacts via ESPE (only when $U_B = 24$ VDC)		\$21 \$22 \$4 V DC \$22 \$32 \$32 \$60 \$70 \$70 \$70 \$70 \$70 \$70 \$70 \$70 \$70 \$7

NOTICE

With single-channel wiring the safety level of your machine/plant may be lower than the safety level of the unit (see Safety characteristic data).

NOTICE

Operation with a light guard or safety switch

It must not be possible to switch off the supply voltage for the PNOZ XV3 separately from the supply voltage for the light guard or safety switch.

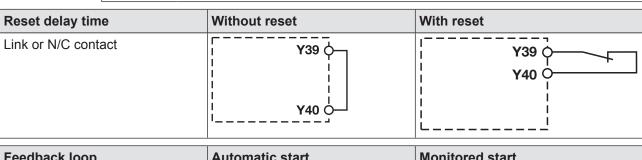

Start circuit	E-STOP wiring Safety gate without start-up test	Safety gate with start-up test
Automatic start	S33 ¢ S34 ¢ S13 O S14 ¢	\$33 \$34 \$14 \$14 \$14 \$14 \$14 \$14 \$14
Monitored start	S33 0 S34 0 S13 0 S14 0 S14 0	

NOTICE

In the event of an automatic start:

The unit starts up automatically when the safeguard is reset, e.g. when the E-STOP pushbutton is released. Use external circuit measures to prevent an unexpected restart.

Feedback loop	Automatic start	Monitored start
Contacts from external contactors	S13	S33

Legend

S1/S2: E-STOP/safety gate switch

S3: Reset button

: Switch operated

: Gate open

▶ ☐: Gate closed

INFORMATION

With automatic start, S33 and S34 must not be linked; with monitored start, S13 and S14 must not be linked.

Operation

NOTICE

Check each safety function

- after initial commissioning and after each change of the machine/ plant
- for SIL CL 3/PL e at least 1x per month, for SIL CL 2/PL d at least 1x per year

Follow the instructions below:

- Activate the safety function and check whether all the used safety contacts open.
- Prepare for operation again and start the unit. All the used safety contacts must be closed again.

The safety functions may only be checked by qualified personnel.

Status indicators

LEDs indicate the status and errors during operation:

LED on

POWER

Supply voltage is present.

START

Start circuit is closed.

CH.1

Safety contacts of channel 1 are closed.

_

CH.2

Safety contacts of channel 2 are closed.

<u>-</u>Q-

CH.1 [t]

Channel 3 safety contacts are closed.

-Q-

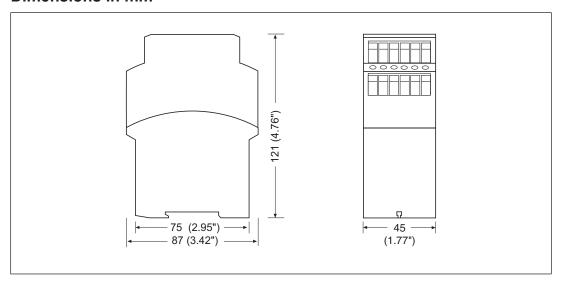

CH.2 [t]

Channel 4 safety contacts are closed.

Faults - Interference

- Earth fault: The supply voltage fails and the safety contacts open. Once the cause of the respective fault has been rectified and the supply voltage is switched off for approx. 1 minute, the unit is ready for operation again.
- Contact malfunctions: If the contacts have welded, reactivation will not be possible after the input circuit has opened.
- ▶ LED "POWER" does not light: Short circuit or no supply voltage.
- In the case of an error, the delay-on de-energisation contacts may open before the delay time has elapsed.

Safety characteristic data

NOTICE

You must comply with the safety-related characteristic data in order to achieve the required safety level for your plant/machine.

Operating mode	EN ISO 13849-1: 2008	EN ISO 13849-1: 2008	EN 62061 SIL CL	EN 62061 PFH _D [1/h]	EN ISO 13849-1: 2008
	PL	Category			T _м [year]
Safety contacts, instantaneous	PL e	Cat. 4	SIL CL 3	2,31E-09	20
Safety contacts, delayed <30 s	PL d	Cat. 3	SIL CL 3	2,64E-09	20
Safety contacts, delayed ≥30 s	PL c	Cat. 1	SIL CL 1	2,87E-09	20

All the units used within a safety function must be considered when calculating the safety characteristic data.

INFORMATION

A safety function's SIL/PL values are **not** identical to the SIL/PL values of the units that are used and may be different. We recommend that you use the PAScal software tool to calculate the safety function's SIL/PL values.

Supplementary data

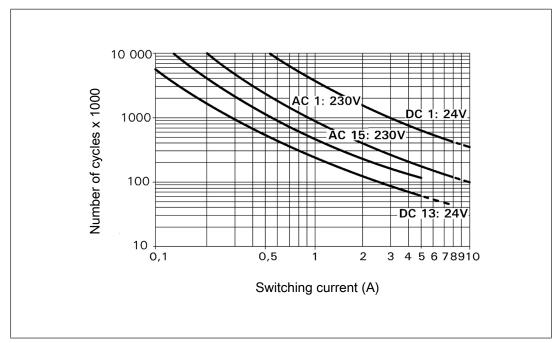

CAUTION!

It is essential to consider the relay's service life graphs. The relay outputs' safety-related characteristic data is only valid if the values in the service life graphs are met.

The PFH value depends on the switching frequency and the load on the relay output. If the service life graphs are not accessible, the stated PFH value can be used irrespective of the switching frequency and the load, as the PFH value already considers the relay's B10d value as well as the failure rates of the other components.

Service life graph

The service life graphs indicate the number of cycles from which failures due to wear must be expected. The wear is mainly caused by the electrical load; the mechanical load is negligible.

Example

- Inductive load: 0.2 A
- Utilisation category: AC15
- Contact service life: 4 000 000 cycles

Provided the application to be implemented requires fewer than 4 000 000 cycles, the PFH value (see Technical details) can be used in the calculation.

To increase the service life, sufficient spark suppression must be provided on all output contacts. With capacitive loads, any power surges that occur must be noted. With DC contactors, use flywheel diodes for spark suppression.

Order reference

Product type	Features	Connection type	Order no.
PNOZ XV3	24 VDC; Delay: 0.5 s fixed	Screw terminals	774 544
PNOZ XV3	24 VDC; Delay: 3 s fixed	Screw terminals	774 545
PNOZ XV3	24 VDC; Delay: 10 s fixed	Screw terminals	774 547
PNOZ XV3	24 VDC; Delay: up to 3 s selectable	Screw terminals	774 542
PNOZ XV3	24 VDC; Delay: up to 30 s selectable	Screw terminals	774 540
PNOZ XV3	24 VDC; Delay: up to 300 s selectable	Screw terminals	774 548
PNOZ XV3	24 VAC; Delay: up to 300 s selectable	Screw terminals	774 541

EC declaration of conformity

This product/these products meet the requirements of the directive 2006/42/EC for machinery of the European Parliament and of the Council. The complete EC Declaration of Conformity is available on the Internet at www.pilz.com/support/downloads.

Pilz develops environmentally-friendly products using ecological materials and energy-saving technologies. Offices and production facilities are ecologically designed, environmentally-aware and energy-saving. So Pilz offers sustainability, plus the security of using energy-efficient products and environmentally-friendly solutions.
