SD means Secure Digital

1 Introduction

The configurable control systems PNOZmulti, PNOZmulti 2 and PNOZmulti Mini each consist of a base unit and expansion modules, where necessary.

Various expansion modules may be connected, depending on the base unit type.

The PNOZmulti Configurator software provides support when assembling a PNOZmulti system.

The maximum system expansion is limited by the maximum permitted number of expansion modules that can be connected.

Positioning of units

- ▶ A maximum of one base unit can be used.
- ▶ Expansion modules may be connected to the left and right, depending on the base unit type.
- ▶ The maximum number per type is given in the tables below.
- ▶ The positions of the expansion modules are defined in the PNOZmulti Configurator.

2 Configurable safe small controllers PNOZmulti Classic

Maximum system expansion:

- ▶ Right of the base unit:
 - 8 expansion modules
- ▶ Left of the base unit
 - 4 expansion modules
 - and
 - 1 fieldbus module
- ▶ Connectable to the link module PNOZ ml2p:
 - 4 decentralised modules per link module (max. 16 decentralised modules)

Example of a control system PNOZmulti: Base unit PNOZ m1p ETH with expansion modules

System expansion depends on the base units:

Expansion modules		Slot	PNOZ m0p (ETH)	PNOZ m1p (ETH)	PNOZ m2p (ETH)	PNOZ m3p (ETH)	
			Number of connectable modules				
Analogue input modules		Left	-	4	4	4	
PNOZ ma1p	Analogue input module						
Link modules		Left	4	4	4	4	
PNOZ ml1p	To connect 2 base units						
PNOZ ml2p	To connect a base unit to up to 4 decentralised modules PDP67 (see below)						
Decentralised modules (connectable to the link module PNOZ ml2p)		Left	16	16	16	16	
PDP67 F 8DI ION	IP67, 8 safe inputs						
PDP67 F 8DI ION HP	IP67, 8 safe inputs						
Input modules		Right	-	8	8	8	
PNOZ mi1p	8 safe inputs						
PNOZ mi2p	8 inputs for standard applications						
Output modules		Right	-	6	6	6	
PNOZ mo1p	4 safe semiconductor outputs						
PNOZ mo2p	2 safe relay outputs						
PNOZ mo3p	2 safe 2-pole semiconductor outputs						
PNOZ mo4p	4 safe relay outputs						
PNOZ mo5p	4 safe, diverse relay outputs						
Output modules for standard applications		Right	-	8	8	8	
PNOZ mc1p	16 semiconductor outputs for standard applications						

Expansion modules		Slot	PNOZ m0p (ETH)	PNOZ m1p (ETH)	PNOZ m2p (ETH)	PNOZ m3p (ETH)
Speed monitor		Right	-	4	4	4
PNOZ ms1p	Monitoring of 2 axes Connectable encoders: Proximity switch, incremental encoder Sin/Cos, TTL					
PNOZ ms2p HTL	Monitoring of 2 axes Connectable encoders: Proximity switch, incremental encoder HTL					
PNOZ ms2p TTL	Monitoring of 2 axes Connectable encoders: Proximity switch, incremental encoder Sin/Cos, TTL					
PNOZ ms3p HTL	Monitoring of 2 axes Connectable encoders: Incremental encoder HTL					
PNOZ ms3p TTL	Monitoring of 2 axes Connectable encoders: Incremental encoder Sin/Cos, TTL					
PNOZ ms4p	Monitoring of 1 axis Connectable encoders: Incremental encoder Sin/Cos, TTL, HTL					

Expansion modules	Slot	PNOZ m0p (ETH)	PNOZ m1p (ETH)	PNOZ m2p (ETH)	PNOZ m3p (ETH)
Fieldbus modules	Left	1	1	1	1
PNOZ mc0p					
		Power supply to supply voltage to fieldbus modules			
PNOZ mc2p		EtherCAT			
PNOZ mc2.1p		EtherCAT (DS301 V4.02 compliant)			
PNOZ mc3p		PROFIBUS-DP			
PNOZ mc4p		DeviceNet			
PNOZ mc5p		Interbus			
PNOZ mc5.1p		Interbus fibre-optic cable			
PNOZ mc6p		CANopen			
PNOZ mc6.1p		CANopen			
PNOZ mc7p		CC-Link			
PNOZ mc8p		Ethernet IP/Modbus TCP			
PNOZ mc9p		Profinet			
PNOZ mc10p		sercos III			
PNOZ mc12p		Ethernet POWERLINK			

2.1

System reaction times

The reaction time between an input switching off and a linked output in the system switching off depends on the delay time at the input and the delay time at the output. The times vary depending on which input/output is used by which device.

Calculation of the max. reaction time:

$$t_{\text{ReactionMax}} = t_{\text{Max. input delay}} + t_{\text{Max. switch-off delay at the output}}$$

Please note that the reaction time is also increased by

- ▶ Delay times configured in the user program
- ▶ Delay on the sensor that is used
- ▶ Delay on the actuator that is used
- ▶ Delay due to periphery devices or control systems

Reaction times of the base units and expansion modules

Modules	Max. input delay	Max. switch-off delay Output (incl. processing time)
PNOZ m0p ... PNOZ m3p	4 ms	30 ms (semiconductor output) 50 ms (relay output)
PNOZ mi1p ... PNOZ mi2p	4 ms	-
PNOZ mo1p, PNOZ mo3p	-	30 ms
PNOZ mo2p, PNOZ mo4p, PNOZ mo5p	-	50 ms
PNOZ ml1p	0 ms ⁽¹⁾	35 ms (connection's transmission delay)
PNOZ ml2p	15 ms + Max. processing time of the input PDP67 ⁽²⁾	35 ms
PNOZ ma1p	100 ms	-
PNOZ ms1p ... PNOZ ms4p	10 ms [+1/f] (+conf.switch-off delay)	-

(1) An input delay is not considered because it is already considered in the output delay of the communication partner.

(2) See technical details in the operating manual

To simplify the calculation, the stated times include various times that need to be considered within the system. As a result, transmission times, for example, do not need to be included separately in the calculation. The processing time in the base unit is already considered in the max. switch off delay at the output.

2.1.1 Example configuration: Input from PNOZ mi2p, output from PNOZ mo3p

Input	Output
PNOZ mi2p	PNOZ mo3p
tInput Delay.Max	tSwitch-offDelay.Max
4 ms	30 ms

$$t_{\text{ReactionMax}} = 4 \text{ ms} + 30 \text{ ms}$$

$$t_{\text{ReactionMax}} = 34 \text{ ms}$$

2.1.1.1

Example configuration: Input from base unit PNOZ m1p, output from PNOZ mo4p

Input PNOZ m1p	Output PNOZ mo4p
Input Delay.Max	Switch-off Delay.Max
4 ms	50 ms

$$t_{\text{ReactionMax}} = 4 \text{ ms} + 50 \text{ ms}$$

$$t_{\text{ReactionMax}} = 54 \text{ ms}$$

3 Configurable safe compact controllers PNOZmulti Mini

Maximum system expansion:

- ▶ Right of the base unit:
 - 1 PNOZsigma expansion module (+1 contact expansion)
- ▶ Left of the base unit
 - 1 fieldbus module
 - and
 - 1 communication module
 - and
 - 4 link modules
- ▶ Connectable to the link module PNOZ mm12p:
 - 4 decentralised modules per link module (max. 16 decentralised modules)

Example of a control system PNOZmulti Mini: Base unit PNOZ mm0.1p with expansion modules

System expansion depends on the base units:

Expansion modules	Slot	PNOZ mm0p	PNOZ mm0.1p	PNOZ mm0.2p	
		Number of connectable modules			
Link modules	Left	-	4	4	
PNOZ mml1p		To connect 2 base units			
PNOZ mml2p	Left	To connect a base unit to up to 4 decentralised modules PDP67 (see below)			
Decentralised modules (connectable to the link module PNOZ mml2p)			16	16	
PDP67 F 8DI ION	Left	IP67, 8 safe inputs			
PDP67 F 8DI ION HP		IP67, 8 safe inputs			
Communication modules	Left	-	1	1	
PNOZ mmc1p		Ethernet interface			
PNOZ mmc2p	Left	Serial interface RS232			
Fieldbus modules			1	1	
PNOZ mmc3p	Left	PROFIBUS DP			
PNOZ mmc4p		DeviceNet			
PNOZ mmc6p	Left	CANopen			
PNOZ mmc7p		CC-Link			
PNOZ mmc11p	Left	EtherCAT			
PNOZ mmc12p		Ethernet POWERLINK			
PNOZsigma output modules	Right	-	1	1	
PNOZ s7		1 safe relay output			
PNOZ s7.1	Right	1 safe relay output (+ 1 PNOZ s7, PNOZ s10 or PNOZ s11 can be connected as a contact expansion module)			
PNOZ s7.2		1 safe relay output (+ 1 expansion module PNOZ s7, PNOZ s10 or PNOZ s11 can be connected)			
PNOZ s10	Right	1 safe relay output			
PNOZ s11		1 safe relay output			
PNOZ s22		2 safe relay outputs			

3.1

System reaction times

The reaction time between an input switching off and a linked output in the system switching off depends on the delay time at the input and the delay time at the output. The times vary depending on which input/output is used by which device.

Calculation of the max. reaction time:

$$t_{\text{ReactionMax}} = t_{\text{Max. input delay}} + t_{\text{Max. switch-off delay at the output}}$$

Please note that the reaction time is also increased by

- ▶ Delay times configured in the user program
- ▶ Delay on the sensor that is used
- ▶ Delay on the actuator that is used
- ▶ Delay due to periphery devices or control systems

Reaction times of the base units and expansion modules

Modules	Max. input delay	t Max. switch-off delay Output (incl. processing time)
PNOZ mm0p ... PNOZ mm0.2p	4 ms	30 ms (semiconductor output)
PNOZ mm0.2p	4 ms	35 ms (virtual outputs for data transfer when 2 base units are connected)
PNOZ s7, PNOZ s7.1, PNOZ s7.2, PNOZ s10, PNOZ s11, PNOZ s22	-	30 ms + delay-on de-energisation of expansion module
PNOZ mml1p	0 ms ⁽¹⁾	35 ms (connection's transmission delay)
PNOZ mml2p	15 ms + input delay PDP67 ⁽²⁾	35 ms

(1) An input delay is not considered because it is already considered in the output delay of the communication partner.

(2) See technical details in the operating manual

To simplify the calculation, the stated times include various times that need to be considered within the system. As a result, transmission times, for example, do not need to be included separately in the calculation. The processing time in the base unit is already considered in the max. switch off delay at the output.

3.1.1

Example configuration: Input from base unit PNOZ mm0.1p, output from PNOZ s7

Input PNOZ mm0.1p	Output PNOZ mo4p
Input Delay.Max	Switch-off Delay.Max
4 ms	30 ms + delay-on de-energisation 30 ms

$$t_{\text{ReactionMax}} = 4 \text{ ms} + 30 \text{ ms} + 30 \text{ ms}$$

$$t_{\text{ReactionMax}} = 64 \text{ ms}$$

4 Configurable safe small controllers PNOZmulti 2

Maximum system expansion:

► To the right of the base unit:

PNOZ m B0

- 6 expansion modules

PNOZ m B1

- 12 expansion modules (restriction: The number of modules PNOZ m EF 4DI4DOR, PNOZ m EF 4DI4DORD and PNOZ m EF 2MM is in total limited to a maximum of 8)
- Until 10/2022 up to Firmware version 1.8: 1 standard module (position: last module to the right of the safety modules)
- Until 11/2022 up to Firmware version 1.8: 6 standard modules (position: to the right of the safety modules)

PNOZ m B0.1

- 1 expansion module

PNOZ m C0

- No expansion module

► To the left of the base unit

PNOZ m B0

- 4 expansion modules
- 1 communication module
- 1 fieldbus module

PNOZ m B1

- 4 expansion modules
- 1 fieldbus module

PNOZ m B0.1

- 4 expansion modules
- 1 communication module
- 1 fieldbus module

PNOZ m C0

- No expansion module

Example of a control system PNOZmulti 2: Base unit PNOZ m B0 with expansion modules

System expansion depends on the base units:

Expansion modules	Slot	PNOZ m B0	PNOZ m B0 V2 (PNOZ m B0.1)	PNOZ m B1 PNOZ m B1 Burner	
		Number of connectable modules			
Link modules	left	4	4 (-)	4	
PNOZ m EF Multi Link

4.1

System reaction times

The reaction time between an input switching off and a linked output in the system switching off depends on the delay time at the input, the delay time at the output and the processing time. The times vary depending on which input/output is used by which device.

Calculation of the max. reaction time:

$$\text{t ReactionMax} = \text{t Max input delay} + \text{t Max processing time.} + \text{t Max switch-off delay at the output}$$

Please note that the reaction time is also increased by

- ▶ Delay times configured in the user program
- ▶ Delay on the sensor that is used
- ▶ Delay on the actuator that is used

Maximum reaction times of the base units **and** expansion modules

Modules	Max. input delay	Max. processing time	Max. switch-off delay Output
PNOZ m B0	2 ms	30 ms	1 ms
PNOZ m B0.1	2 ms	30 ms	1 ms
PNOZ m B1 (FS)	-	30 ms	-
PNOZ m B1 (ST)	-	3 ms	-
PNOZ m EF 16DI	8 ms	-	-
PNOZ m EF 4AI	8 ms + signal smoothing ⁽¹⁾	5 ms	-
PNOZ m EF 8DI4DO	8 ms	-	3 ms
PNOZ m EF 4DI4DOR	8 ms	-	22 ms
PNOZ m EF 4DI4DORD	8 ms	-	22 ms
PNOZ m EF 2DOR	8 ms	-	22 ms
PNOZ m EF 8DI2DOT	8 ms + pulse suppression ⁽²⁾	-	6 ms
PNOZ m EF 8DI2DOT Input and output in the module program	8 ms + pulse suppression ⁽²⁾	-	-
PNOZ m EF Multi Link	0 ms ⁽³⁾	-	5 ms (connection's transmission delay)
PNOZ m EF PDP Link	15 ms + Max. processing time of the input PDP67 ⁽⁴⁾	-	5 ms
PNOZ m EF SafetyNET	0 ms	-	25 ms (connection's transmission delay)
PNOZ m EF 1MM, PNOZ m EF 2MM (configuration in the main program)	1/f_actual + 16 ms ⁽⁵⁾	-	-

Modules	Max. input delay	Max. processing time	Max. switch-off delay Output
PNOZ m EF 1MM, PNOZ m EF 2MM (configuration in the module program)	1/f_actual + 8 ms⁽⁵⁾	8 ms	-
PNOZ m EF 1MM2DO	Speed detection: 1/f_actual + 5 ms⁽⁵⁾ Cascading: 1.6 ms	4 ms	Semiconductor output: 1 ms Cascading: 0.1 ms Signal output: 0.1 ms
PNOZ m ES 14DO	-	-	1 ms
Program connector	0 ms⁽⁶⁾	-	0 ms

(1) The signal smoothing can be set in the PNOZmulti Configurator (default setting: 2 ms).

(2) The pulse suppression time can be set in the PNOZmulti Configurator (default setting: 0.8 ms).

(3) An input delay does not need to be considered because it is already considered in the output delay of the communication partner.

(4) See technical details in the operating manual

(5) **1/f_actual** corresponds to the period length T of the measured frequency. The maximum input delay **1/f_actual + X ms** is the reaction time at the input after a limit value is exceeded.

(6) No additional time needs to be added for data exchange between main program processing and module program processing via the program connectors. This delay is already included in the processing times.

NOTICE

Please note:

If a signal in the user program is repeatedly transferred back and forth between the main program and module program via program connectors, then the processing times must be added multiple times.

To simplify the calculation, the stated times include various times that need to be considered within the system. As a result, transmission times, for example, do not need to be included separately in the calculation.

4.1.1 Example configuration: Input from PNOZ m EF 8DI4DO, output from PNOZ m EF 8DI4DO

Input PNOZ m EF 8DI4DO	Processing in the main program	Output PNOZ m EF 8DI4DO
Max. input delay	Processing time	Switch-off delay
8 ms	30 ms	3 ms

$$t_{\text{ReactionMax}} = 8 \text{ ms} + 30 \text{ ms} + 3 \text{ ms}$$

$$t_{\text{ReactionMax}} = 41 \text{ ms}$$

4.1.2 Example configuration: Input from base unit, output from PNOZ m EF 4DI4DOR

Input PNOZ m B0	Processing in the main program	Output PNOZ m EF 8DI4DOR
Max. input delay	Processing time	Switch-off delay
2 ms	30 ms	22 ms

$$t_{\text{ReactionMax}} = 2 \text{ ms} + 30 \text{ ms} + 22 \text{ ms}$$

$$t_{\text{ReactionMax}} = 54 \text{ ms}$$

4.1.3 Example configuration: Input from base unit, output from base unit

Base unit input	Processing in the main program	Base unit output
Max. input delay	Processing time	Switch-off delay
2 ms	30 ms	1 ms

$$t_{\text{ReactionMax}} = 2 \text{ ms} + 30 \text{ ms} + 1 \text{ ms}$$

$$t_{\text{ReactionMax}} = 33 \text{ ms}$$

4.1.4 Example configuration: Input from PNOZ m EF 16DI, output for standard applications from PNOZ m ES 14DO

Input PNOZ m EF 16DI	Processing in the main program	Output PNOZ m ES 14DO
Max. input delay	Processing time (FS + ST)	Switch-off delay
8 ms	30 ms + 3 ms	1 ms

$$t_{\text{ReactionMax}} = 8 \text{ ms} + 30 \text{ ms} + 3 \text{ ms} + 1 \text{ ms}$$

$$t_{\text{ReactionMax}} = 42 \text{ ms}$$

4.1.5**Example configuration: Input from PNOZ m EF 16DI, output for standard applications from PNOZ m ES 14DO**

Input PNOZ m EF 16DI Max. input delay	Processing in the main program Processing time (FS + ST)	Output PNOZ m ES 14DO Switch-off delay
8 ms	30 ms + 3 ms	1 ms

$$t_{\text{ReactionMax}} = 8 \text{ ms} + 30 \text{ ms} + 3 \text{ ms} + 1 \text{ ms}$$

$$t_{\text{ReactionMax}} = 42 \text{ ms}$$

4.1.6**Example configuration: Input from PNOZ m EF 4AI, output from base unit**

$$t_{\text{SignalSmoothing}} = 2 \text{ ms}$$

Input PNOZ m EF 4AI Max. input delay	Processing in the module program Processing time	Processing in the main program Processing time	Base unit output Output delay
8 ms + signal smoothing	5 ms	30 ms	1 ms

$$t_{\text{ReactionMax}} = 8 \text{ ms} + 2 \text{ ms} + 5 \text{ ms} + 30 \text{ ms} + 1 \text{ ms}$$

$$t_{\text{ReactionMax}} = 46 \text{ ms}$$

4.1.7**Example configuration: Input from PNOZ m EF 4AI, output from PNOZ m EF 8DI4DO**

$$t_{\text{SignalSmoothing}} = 2 \text{ ms}$$

Input PNOZ m EF 4AI Max. input delay	Processing in the module program Processing time	Processing in the main program Processing time	Output PNOZ m EF 8DI4DO Switch-off delay
8 ms + signal smoothing	5 ms	30 ms	3 ms

$$t_{\text{ReactionMax}} = 8 \text{ ms} + 2 \text{ ms} + 5 \text{ ms} + 30 \text{ ms} + 3 \text{ ms}$$

$$t_{\text{ReactionMax}} = 48 \text{ ms}$$

4.1.8**Example configuration: Input from PNOZ m EF 8DI2DOT, output from PNOZ m EF 8DI2DOT (in the main program)**

Input PNOZ m EF 8DI2DOT Max. input delay	Processing in the main program Processing time	Output PNOZ m EF 8DI2DOT Switch-off delay
8 ms + pulse suppression 0.8 ms	30 ms	6 ms

$$t_{\text{ReactionMax}} = 8 \text{ ms} + 0.8 \text{ ms} + 30 \text{ ms} + 6 \text{ ms}$$

$$t_{\text{ReactionMax}} = 44.8 \text{ ms}$$

4.1.9 Example configuration: Input from PNOZ m EF 8DI2DOT, output from PNOZ m EF 8DI4DO

Input PNOZ m EF 8DI2DOT	Processing in the main program	Output PNOZ m EF 8DI4DO
Max. input delay	Processing time	Switch-off delay
8 ms + pulse suppression 0.8 ms	30 ms	3 ms

$$t_{\text{ReactionMax}} = 8 \text{ ms} + 0.8 \text{ ms} + 30 \text{ ms} + 3 \text{ ms}$$

$$t_{\text{ReactionMax}} = 41.8 \text{ ms}$$

4.1.10 Example configuration: Input from PNOZ m EF 1MM (configured in the main program), output from base unit

$$f_{\text{ist}} = 100 \text{ Hz}$$

Input PNOZ m EF 1MM	Processing in the main program	Base unit output
Max. input delay	Processing time	Switch-off delay
26 ms	30 ms	1 ms

$$1/f_{\text{ist}} = 1/100 \text{ Hz} = 10 \text{ ms}$$

$$1/f_{\text{ist}} + 16 \text{ ms} = 26 \text{ ms}$$

$$t_{\text{ReactionMax}} = 26 \text{ ms} + 30 \text{ ms} + 1 \text{ ms}$$

$$t_{\text{ReactionMax}} = 57 \text{ ms}$$

4.1.11 Example configuration: Input from PNOZ m EF 1MM (configured in the module program), output from PNOZ m EF 8DI4DO

$f_{ist} = 100 \text{ Hz}$

Input PNOZ m EF 1MM	Processing in module pro- gram	Program connectors (output sig- nal from the module program to the main program)	Processing in the main pro- gram	Output PNOZ m EF 8DI4DO
Input Delay.Max	Processing Max		Processing Max	Switch-off delay
18 ms	8 ms	0 ms	30 ms	3 ms

$$1/f_{ist} = 1/100 \text{ Hz} = 10 \text{ ms}$$

$$1/f_{ist} + 8 \text{ ms} = 18 \text{ ms}$$

$$t_{ReactionMax} = 18 \text{ ms} + 8 \text{ ms} + 30 \text{ ms} + 1 \text{ ms}$$

$$t_{ReactionMax} = 57 \text{ ms}$$

4.1.12 Example configuration: Input from PNOZ m EF 1MM2DO, output from PNOZ m EF 1MM2DO

$f_{ist} = 100 \text{ Hz}$

Input PNOZ m EF 1MM2DO Input Delay.Max	Processing in module program Max. processing time	Output PNOZ m EF 1MM2DO Switch-off delay
15 ms	4 ms	1 ms

$$1/f_{ist} = 1/100 \text{ Hz} = 10 \text{ ms}$$

$$1/f_{ist} + 5 \text{ ms} = 15 \text{ ms}$$

$$t_{ReactionMax} = 15 \text{ ms} + 4 \text{ ms} + 1 \text{ ms}$$

$$t_{ReactionMax} = 20 \text{ ms}$$

4.1.13 Test pulse suppression at the inputs

On function elements with switch type 3 (see online help for the PNOZmulti Configurator) a test pulse suppression on the inputs can be activated. This function can be used when self-monitored switches are used that create switch-off pulses $> 300 \mu\text{s}$.

When test pulse suppression is activated please note that the reaction time can increase by up to 15 ms!

5 Connection of multiple PNOZmulti systems

For safe data exchange two or more configurable control systems PNOZmulti can be connected to each other.

There are various options available:

► PNOZmulti Link connection

The connection is created via two connection modules and/or connection interfaces that are assigned to one base unit each.

Any number of base units can be connected via connection modules.

However, only a max. of 4 link modules can be connected to a base unit.

► SafetyNET p RTFL connection

The systems PNOZmulti 2 can also be connected via SafetyNET p RTFL. Up to 16 base units can be connected in a linear structure. Each base unit can create safe connections to the other connected base units. The position of the base units in the line does not matter.

The reaction times are independent of the number of subscribers and their position in the line.

Connection via PNOZmulti Link

Example: Connecting 4 base units

Connection options

	PNOZ m B0, PNOZ m B1 +PNOZ m EF Multi Link	PNOZ m0p/1p/ 2p/3p (ETH) +PNOZ ml1p	PNOZ mm0p PNOZ m C0	PNOZ mm0.1p +PNOZ mmI1p	PNOZ mm0.2p
PNOZ m B0, PNOZ m B1 +PNOZ m EF Multi Link	x	x		x	x
PNOZ m0p/1p/2p/ 3p (ETH) +PNOZ ml1p	x	x		x	x
PNOZ mm0p PNOZ m C0					
PNOZ mm0.1p + PNOZ mmI1p	x	x		x	x
PNOZ mm0.2p	x	x		x	x

Connection via SafetyNET p

Connection options

	PNOZ m B0, PNOZ m B1 + PNOZ m EF SafetyNET
PNOZ m B0, PNOZ m B1 +PNOZ m EF SafetyNET	x

5.1

Reaction times of the Multi Link connection

The reaction time when connecting two or more base units is calculated from the transmission delay of the connection at the link module of a communication partner and the input delay at the link module of the connected communication partner.

5.1.1

Example: Connecting 3 base units PNOZmulti

The maximum reaction time $t_{\text{ReactionMax}}$ includes the following times:

- ▶ Max. input delay PNOZ m1p (Base 1): 4 ms
- ▶ Data transfer time of the connection at the PNOZ m1p (Base 1): 35 ms
- ▶ Max. input delay PNOZ m1p (Base 2): 0 ms
- ▶ Data transfer time of the connection at the PNOZ m1p (Base 2): 35 ms
- ▶ Max. input delay PNOZ m1p (Base 3): 0 ms
- ▶ Max. switch-off delay at the output PNOZ m1p: 30 ms

$$t_{\text{ReactionMax}} = 4 \text{ ms} + 35 \text{ ms} + 0 \text{ ms} + 35 \text{ ms} + 0 \text{ ms} + 30 \text{ ms}$$

$$t_{\text{ReactionMax}} = 104 \text{ ms}$$

5.1.2

Example: Connecting 5 base units PNOZmulti

The maximum reaction time $t_{\text{ReactionMax}}$ includes the following times:

- ▶ Max. input delay PNOZ mm0.1p (Base 1): 4 ms
- ▶ Data transfer time of the connection at the PNOZ mm1p (Base 1): 35 ms
- ▶ Max. input delay PNOZ mm1p (Base 2): 0 ms
- ▶ Data transfer time of the connection at the PNOZ mm1p (Base 2): 35 ms
- ▶ Max. input delay PNOZ mm1p (Base 2): 0 ms
- ▶ Data transfer time of the connection at the PNOZ ml1p (Base 4): 35 ms
- ▶ Max. input delay PNOZ m EF Multi Link (Base 5): 0 ms
- ▶ Max. processing time PNOZ m B0 (Base 5): 30 ms
- ▶ Max. switch-off delay at the output PNOZ m B0 (Base 5): 1 ms

Connection of multiple PNOZmulti systems

$$t_{\text{ReactionMax}} = 4 \text{ ms} + 35 \text{ ms} + 0 \text{ ms} + 35 \text{ ms} + 0 \text{ ms} + 35 \text{ ms} + 0 \text{ ms} 30 \text{ ms} + 1 \text{ ms}$$

$$t_{\text{ReactionMax}} = 140 \text{ ms}$$

5.2

Reaction times of the connection via SafetyNET p

The reaction time with the SafetyNET p connection of two base units is calculated from the delay of the input and output modules, the processing time of the two base units and the input and output delay of the PNOZ m EF SafetyNET module.

5.2.1

Example configuration: Reaction time of PNOZ m EF 8DI4DO of Base 1 to output PNOZ m EF 8DI4DO of Base 3

Input PNOZ m EF 8DI4DO (Base 1) Input delay Max	Processing in main program Processing Max	Output PNOZ m EF SafetyNET (Base 1) Connection's transmission delay	Input PNOZ m EF SafetyNET (Base 3) Input delay. Max	Processing in the main pro- gram Processing Max	Output PNOZ m EF 8DI4DO (Base 3) Switch-off delay
8 ms	30 ms	25 ms	0 ms	30 ms	3 ms

$$t_{\text{ReactionMax}} = 8 \text{ ms} + 30 \text{ ms} + 25 \text{ ms} + 0 \text{ ms} + 30 \text{ ms} + 3 \text{ ms}$$

$$t_{\text{ReactionMax}} = 96 \text{ ms}$$

Pilz develops environmentally-friendly products using ecological materials and energy-saving technologies. Offices and production facilities are ecologically designed, environmentally-aware and energy-saving. So Pilz offers sustainability, plus the security of using energy-efficient products and environmentally-friendly solutions.

We are represented internationally. Please refer to our homepage www.pilz.com for further details or contact our headquarters.
