Introduction

Validity of documentation

This documentation is valid for the product PSEN cs6.1n. It is valid until new documentation is published.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

Definition of symbols

Information that is particularly important is identified as follows:

DANGER!

This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

WARNING!

This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

CAUTION!

This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

NOTICE

This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

INFORMATION

This gives advice on applications and provides information on special features.

Safety

Intended use

The safety functions of the safety switch are:

- ▶ Safe shutdown of safety outputs when the actuator is removed beyond the assured release distance s_{ar} or when the actuator is not detected
- ▶ Remain shut down safely after the actuator has been removed

The safety switch meets the requirements in accordance with:

- ▶ EN 60947-5-3: PDDDB with one of the approved actuators
- ▶ EN 62061: SIL CL 3
- ▶ EN ISO 13849-1: PL e (Cat. 4)
- ▶ EN ISO 14119: Coding level High, type 4

The safety switch may only be used with one of the approved actuators.

The safety level PL e (Cat. 4)/SIL CL 3 is only achieved if

- ▶ the safety outputs use 2-channel processing.

Improper use

The following is deemed improper use in particular

- ▶ Any component, technical or electrical modification to the product,
- ▶ Use of the product outside the areas described in this operating manual,
- ▶ Use of the product outside the technical details (see [Technical details](#)  32).

NOTICE

EMC-compliant electrical installation

The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

Approved actuators:

- ▶ PSEN cs6.1
- ▶ PSEN cs6.1 low profile glue
- ▶ PSEN cs6.1 low profile screw

Safety regulations

Safety assessment

Before using a device, a safety assessment in accordance with the Machinery Directive is required.

The product as an individual component fulfils the functional safety requirements in accordance with EN ISO 13849 and EN 62061. However, this does not guarantee the functional safety of the overall plant/machine. To achieve the relevant safety level of the overall plant/machine's required safety functions, each safety function needs to be considered separately.

Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by persons who are competent to do so.

A competent person is a qualified and knowledgeable person who, because of their training, experience and current professional activity, has the specialist knowledge required. To be able to inspect, assess and operate devices, systems and machines, the person has to be informed of the state of the art and the applicable national, European and international laws, directives and standards.

It is the company's responsibility only to employ personnel who

- ▶ Are familiar with the basic regulations concerning health and safety / accident prevention,
- ▶ Have read and understood the information provided in the section entitled Safety
- ▶ Have a good knowledge of the generic and specialist standards applicable to the specific application.

Warranty and liability

All claims to warranty and liability will be rendered invalid if

- ▶ The product was used contrary to the purpose for which it is intended,
- ▶ Damage can be attributed to not having followed the guidelines in the manual,
- ▶ Operating personnel are not suitably qualified,
- ▶ Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

Disposal

- ▶ In safety-related applications, please comply with the mission time T_M in the safety-related characteristic data.
- ▶ When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

For your safety**WARNING!****Loss of safety function due to manipulation of the interlocking device**

Manipulation of the interlocking device may lead to serious injury and death.

- You should prevent any possibility of the interlocking device being manipulated through the use of a spare actuator.
- Keep the substitute actuator in a safe place and protect it from unauthorised access.
- If substitute actuators are used, these must be installed as described under [Installation](#) [ 21].
- If the original actuators are replaced with substitute actuators, the original actuators must be destroyed before disposal.

- ▶ Do not remove the connector's protective cap until you are just about to connect the unit. This will prevent potential contamination.

Unit features

- ▶ Transponder technology for presence detection
- ▶ Pilz coding type: fully coded
- ▶ Dual-channel operation
- ▶ 2 safety outputs
- ▶ 1 signal output
- ▶ LED display for:
 - State of the actuator
 - State of the inputs (always lights up yellow)
 - Supply voltage/fault
- ▶ 4 actuation directions, each with 3 approach directions (see [Explanation of markings](#) [ 10])
 - Square marking for normal operating distance
 - Triangle marking for short operating distance
 - 2 semicircle markings for a lateral approach. Please note the Lateral and vertical offset with the lateral approach to the semicircle marking.

The guaranteed safe operating distances for the specified selections only apply when the actuator approaches the switch vertically. With the other approach directions, the operating distances may sometimes be considerably larger (particularly when approaching the semicircle).

Function description

Basic function

The safety outputs may have a high or low signal, depending on the position of the actuator.

State of the outputs:

Actuator in the re- sponse range	Safety output 12	Safety output 22	Signal output Y32
Yes	High	High	High
No	Low	Low	Low

Block diagram

Operating distances

Actuator PSEN cs6.1	Actuator PSEN cs6.1 low profile glue or PSEN cs6.1 low pro- file screw	Operating distances
 <p>[1]</p>	 <p>[4]</p>	<p>[1] Actuator PSEN cs6.1 aligned to the square marking on the switch</p> <p>S_{ao} Assured operating distance: 8 mm S_{ar} Assured release distance: 20 mm S_o Typical operating distance: 11 mm S_r Typical release distance: 14 mm</p> <p>[4] Actuator PSEN cs6.1 low profile glue or PSEN cs6.1 low profile screw aligned to the square marking on the switch</p> <p>S_{ao} Assured operating distance: 5 mm S_{ar} Assured release distance: 20 mm S_o Typical operating distance: 10 mm S_r Typical release distance: 12 mm</p>
 <p>[2]</p>		<p>[2] Actuator PSEN cs6.1 aligned to the triangle marking on the switch</p> <p>S_{ao} Assured operating distance: 4 mm S_{ar} Assured release distance: 12 mm S_o Typical operating distance: 5 mm S_r Typical release distance: 8 mm</p> <p>The alignment of the actuators PSEN cs6.1 low profile glue or PSEN cs6.1 low profile screw to the triangle marking is not provided for</p>
 <p>[3]</p>	 <p>[6]</p>	<p>[3] Actuator PSEN cs6.1 aligned to the semicircle marking on the switch</p> <p>S_{ao} Assured operating distance: 3 mm S_{ar} Assured release distance: 16 mm S_o Typical operating distance: 6 mm S_r Typical release distance: 8 mm</p> <p>[6] Actuator PSEN cs6.1 low profile glue or PSEN cs6.1 low profile screw aligned to the semicircle marking on the switch</p> <p>S_{ao} Assured operating distance: 2 mm S_{ar} Assured release distance: 14 mm S_o Typical operating distance: 5 mm S_r Typical release distance: 7 mm</p>

The switching distances of the actuators PSEN cs6.1 low profile glue and PSEN cs6.1 low profile screw were determined under the following conditions:

- ▶ Assured operating distance S_{ao} and assured release distance S_{ar}
 - Measurement over the entire temperature range
 - Installed on various base materials
 - Taking into account product tolerances
- ▶ Typical operating distance S_o and typical release distance S_r
 - Measured at room temperature
 - Installed on plastic

Lateral and vertical offset

Lateral offset when aligning to the triangle or square marking

	Alignment 1: Actuator PSEN cs6.1 aligned to the square marking on the switch	Alignment 2: Actuator PSEN cs6.1 aligned to the triangle marking on the switch
		
	Alignment 1: Actuator PSEN cs6.1 low profile glue or PSEN cs6.1 low profile screw aligned to the square marking on the switch	Alignment 2: Actuator PSEN cs6.1 low profile glue or PSEN cs6.1 low profile screw aligned to the triangle marking on the switch
		<p>Actuator PSEN cs6.1 low profile glue or PSEN cs6.1 low profile screw to triangle marking is not suitable because the operating distances are too low.</p>

Wiring

Important information

- ▶ Information given in the [Technical details \[32\]](#) must be followed.
- ▶ Switch off the supply voltage before disconnecting the plug-in connection.
- ▶ Make sure that when connecting or separating the connector the pollution degree 1 or 2 is maintained.
- ▶ The power supply must meet the regulations for extra low voltages with protective electrical separation (SELV, PELV).
- ▶ The outputs of the safety switch must have a protective separation to voltages over 60 V AC.
- ▶ The supply voltage to the safety switch must be protected with a 2 A to 4 A quick-acting fuse.
- ▶ Ensure the wiring and EMC requirements of EN 60204-1 are met.

Pin assignment, connector and cable

	5-pin M12 male connector
--	--------------------------

PIN	Pin designation	Function	Wire colour
1	A1	+24 V UB	brown
2	12	Output, channel1	white
3	A2	0 V UB	blue
4	22	Output, channel2	black
5	Y32	Signal output	grey

The wire colour also applies for the cable available from Pilz as an accessory.

Connection to evaluation devices

Make sure that the selected evaluation device has the following property:

- ▶ OSSD signals are evaluated through 2 channels with plausibility monitoring

Single connection

CAUTION!

Do not connect the signal output to 0 V!

If the signal output Y32 is connected to 0 V, the safety switch may be damaged as a result. Connect the signal output Y32 to a consumer, e.g. to the input on a control system, or leave the signal output unconnected. Also note the max. current (see [Technical details \[32\]](#)).

Connection to Pilz evaluation devices

The safety switch PSEN cs6.1n can be connected to Pilz evaluation devices, for example.

Suitable Pilz evaluation devices are, for example:

- ▶ PNOZelog for safety gate monitoring
- ▶ PNOZpower for safety gate monitoring
- ▶ PNOZsigma for safety gate monitoring
- ▶ PNOZ X for safety gate monitoring
- ▶ PNOZmulti for safety gate monitoring
Configure the safety switch in the PNOZmulti Configurator with switch type 3.
- ▶ PSS for safety gate monitoring with standard function block SB064, SB066 or FS_Safety Gate

The correct connection to the respective evaluation device is described in the operating manual for the evaluation device. Make sure that the connection is made in accordance with the specifications in the operating manual for the selected evaluation device.

The connections to two evaluation devices are shown on the following pages, by way of example:

- ▶ PNOZ s3 and
- ▶ PNOZmulti

PNOZ s3

PNOZmulti

Teaching in the actuator

Teaching in the actuator for the first time:

The first actuator to be detected by the safety switch (see [Intended use](#) [📖 6]) is taught in automatically as soon as it is brought into the response range.

To teach in a new actuator:

A maximum of 8 learning procedures are possible.

1. The actuator that is to be taught in must be brought into the safety switch's response range as the only transponder. As soon as the actuator is detected, the "Safety Gate" LED will flash yellow.
2. After 20 s has elapsed, the "Safety Gate" LED turns to quick yellow flashes. Trigger a system reset in the next 120 s by interrupting the power supply.
3. When the supply voltage is switched back on, the learning procedure is complete and the number of permitted additional learning procedures is reduced by 1.

NOTICE

- The actuator must not be removed during the learning procedure.
- It is no longer possible to re-teach this actuator on the same safety switch.

Installation

General

CAUTION!

Potential loss of safety function due to changed device properties

The unit's properties may be affected if installed in an environment containing electrically or magnetically conductive material.

- Please check the operating distances and the assured release distance.

- ▶ The safety switch and actuator should be installed opposite each other in parallel. Make sure that the actuator is aligned to the marking on the safety switch that guarantees the operating distance required by the plant design (see [Operating distances](#) [📖 10]).
- ▶ Torque setting: Please note the information provided under [Technical details](#) [📖 32].

- ▶ The distance between two safety switches must be maintained (see [Technical details \[32\]](#)).

The distance can be undershot in certain application cases (see diagrams).

- ▶ Make sure that the safety switch and actuator cannot be used as an end stop.
- ▶ Please note the installation measures in accordance with EN ISO 14119 for a safety switch design 4 and with level of coding High.
- ▶ Please note the permitted bending radii for the cable (see [Technical details \[32\]](#)), to avoid excessive force on the individual strands.
- ▶ Make sure that the bend protection is not damaged. Such damage can cause the whole product to fail.
- ▶ For simpler installation, the mounting brackets (see [Order reference for Accessories \[41\]](#)) can be used.

WARNING!

Loss of safety function due to non-permitted enlargement of the assured release distance when using both switching lobes (aligned at semicircle marking)

Depending on the application, serious injury or death may result.

- Install a mechanical stop when using the response range at the semicircle marking, to avoid unintended switching off at the limit of the response range and to prevent the maximum release distance from enlarging impermissibly by using both switching lobes.

Legend

- [1] Hysteresis
- [2] Typical operating distance S_o
- [3] Typical release distance S_r
- [4] Offset in mm (distance of the middle of the actuator to the zero line in the grid)
- [5] Operating distance in mm

- [7] Connector on the safety switch
- [8] Limit of response range, position of gate hinge
- [9] Status of LED
- [10] Sensing face of the actuator, labelled with Pilz logo
- [11] Distance from the front edge of the safety switch to the limit of the response range (position of the gate end stop) = 15.9 mm
- [12] Distance from the rear edge of the safety switch to the limit of the response range (position of the gate end stop) = 10.5 mm

Safety switch

- ▶ Safety switches should only be secured using M4 screws with a flat head (e.g. M4 cheese-head or pan head screws).

Procedure:

1. Provide the mounting surface with two drill holes for fastening the safety switch (see [Dimensions \[31\]](#)).
2. Use a screw to fix the safety switch to the mounting surface.
Make sure that the safety switch marking that is to be used for operation can be operated using the actuator from the right side.
3. Do not fully tighten the second screw on the safety switch.

Actuator 6.1

Procedure actuator PSEN cs6.1

1. Provide the mounting surface with two drill holes for fastening the actuator (see [Dimensions](#) [ 31]).
2. Use a screw to fix the actuator to the mounting surface.
Make sure that the actuator with the marking (triangle) points towards the marking on the safety switch.
3. Do not fully tighten the second screw on the actuator.

Actuator 6.1 low profile

WARNING!

Loss of the manipulation protection by inadequate environmental conditions

The loss of the manipulation protection can allow manipulation of the interlocking device and it may lead to serious injury or death.

- Make sure that the actuator has no direct or repetitive contact with materials such as methyl ethyl ketone (MEK), petrol or isopropanol.

- ▶ The actuator is secured against unauthorised removal, and against contamination by the sealing. The seal should be regarded as equivalent to using permanent fastenings in accordance with EN ISO 14119.
- ▶ By removing the actuator, the actuator will be destroyed.
- ▶ The actuator's adhesive force on the materials aluminium, stainless steel, polycarbonate and glass was checked. For deviating surface materials check the adhesive force on the surface.
- ▶ After a cure time of 24 hours, 90 % of the final adhesive force are achieved. The hardening must take place at min. 20 °C. With lower temperatures the cure time is clearly extended.
- ▶ No continuous force must affect the actuator.

Procedure actuator PSEN cs6.1 low profile glue:

1. To seal the low profile actuators correctly, it is necessary to prepare the surface to which the actuator is to be attached.

The surface must be clean, dry and free of grease.

Wipe off any solved grease and contaminations with a new, dry paper cloth.

Clean the surface with 70% isopropanol. Use lint-free paper cloths and change the paper cloths frequently.

The adhesive surface is clean when the paper remains clean.

The cleaned surfaces must be sealed immediately to prevent any new contamination by dust and fingerprints.

2. Remove the protective foil from the assembly aid and fix it flush with the sides (see diagram) to the required sensing area of the safety switch.
3. Place the actuator into the assembly aid so that the actuator's covered adhesive surface is on the surface.

Make sure that the actuator's centre is on the same level as the orientation arrows of the sensor and in the centre of the sensor.

Fig.: Safety switch with assembly aid and low profile actuator oriented to semicircle and square marking

Legend

- [1] Assembly aid for low profile actuator
- [2] low profile actuator

4. Remove the protective foil from the adhesive foil of the actuator.
Do not touch the adhesive foil after removing the protective foil!
5. Close the safety gate carefully and then press the actuator to the adhesive position.
6. Press on the actuator for at least 3 seconds with approx. 50 N.
After this time, an adhesive force of approx. 50 % is achieved. The full adhesive force is achieved after 72 hours at an ambient temperature of at least 20 °C.
7. Check the adhesive force of the glue after 10 minutes.
The actuator must no move when pressed sideways.
8. Remove the assembly aid from the safety switch and clean the sensing area of the safety switch.

Procedure actuator PSEN cs6.1 low profile screw

1. Provide the mounting surface with a drill hole for an additional actuator screw connection (see [Dimensions](#) [ 31]).

2. To seal the low profile actuators correctly, it is necessary to prepare the surface to which the actuator is to be attached.

The surface must be clean, dry and free of grease.

Wipe off any solved grease and contaminations with a new, dry paper cloth.

Clean the surface with 70% isopropanol. Use lint-free paper cloths and change the paper cloths frequently.

The adhesive surface is clean when the paper remains clean.

The cleaned surfaces must be sealed immediately to prevent any new contamination by dust and fingerprints.

3. Remove the protective foil from the adhesive foil of the actuator.

Do not touch the adhesive foil after removing the protective foil!

4. Insert the screw into the actuator's hole and position the screw at the hole on the mounting surface.

To screw on the actuator, use the supplied plastic M3 countersunk screw.

When using a screw mad from metal the operating distance change, please note the [Warning](#) [ 21].

5. Then press the actuator firmly to the gluing position.

6. Press on the actuator for at least 3 seconds with approx. 50 N.

After this time, an adhesive force of approx. 50 % is achieved. The full adhesive force is achieved after 72 hours at an ambient temperature of at least 20 °C.

7. Check the adhesive force of the glue after 10 minutes.

The actuator must no move when pressed sideways.

8. Tighten the M3 plastic screw to 0.1 Nm.

Align safety switch and actuator

- ▶ The actuator should only be secured using M4 screws with a flat head (e.g. M4 cheese-head or pan head screws).

The actuator should be protected from unauthorised removal and from contamination.

Close the mounting holes using the seals provided. The use of seals should be regarded as equivalent to using permanent fastenings in accordance with EN ISO 14119.

Legend

- [1] 4 seals for actuators
- [2] Unused seals
- [3] 2 seals for actuators
- [4] 2 seals for switches, 2 seals unused

Fig.: Applying the screw covers [1] and [3] on the actuator

Fig.: Applying the screw cover [4] on the switch

Procedure:

1. Align the safety switch and tighten the screws.
2. Actuator PSEN cs6.1
Align the actuator and tighten the screws.
3. Use the seals to close the mounting holes on the sensing face of the safety switch (see diagram, [4]).

Use in operating heights higher than 2000 m above sea level

When using the PSEN cs6.1n note the reduced max. ambient temperature of +60 °C at a height of 2000 m to 4000 m.

Adjustment

- ▶ The stated operating distances (see [Technical details \[32\]](#)) only apply when the safety switch and actuator are installed facing each other in parallel. Operating distances may deviate if other arrangements are used.
- ▶ Note the maximum permitted lateral and vertical offset (see [Operating distances \[10\]](#) and [Lateral and vertical offset \[12\]](#)).

Operation

NOTICE

The safety function should be checked after initial commissioning and each time the plant/machine is changed. The safety functions may only be checked by qualified personnel.

Status indicators:

Legend:

	LED off
	LED on
	LED flashes (500 ms on, 500 ms off)
	LED flashes quickly (50 ms on, 950 ms off)
	LED flashes very quickly (30 ms on, 470 ms off)

Climatic suitability	
In accordance with the standard	EN 60068-2-30
Humidity	93 % r. h. at 40 °C
Max. operating height above sea level	4000 m
EMC	EN 60947-5-3
Vibration	
In accordance with the standard	EN 60947-5-2
Frequency	10 - 55 Hz
Amplitude	1 mm

Environmental data

Shock stress

In accordance with the standard	EN 60947-5-2
Acceleration	30g
Duration	11 ms

Airgap creepage

Overvoltage category	III
Pollution degree	3

Rated insulation voltage

75 V

Rated impulse withstand voltage

1 kV

Protection type

Housing	IP66, IP67
---------	-------------------

Operating distances

Actuator 1

Type	PSEN cs6.1
Repetition accuracy switching distances	3 %
Change of operating distance with temperature changes	+0,02mm/°C

Actuator 2

Type	PSEN cs6.1 low profile glue
Repetition accuracy switching distances	3 %
Change of operating distance with temperature changes	+0,02mm/°C

Actuator 3

Type	PSEN cs6.1 low profile screw
Repetition accuracy switching distances	3 %
Change of operating distance with temperature changes	+0,02mm/°C

Operating distances when the actuator approaches square marking

Actuator 1

Type	PSEN cs6.1
Assured operating distance S_{ao}	8 mm
Assured release distance S_{ar}	20 mm
Typical operating distance S_o	11 mm
Typical release distance S_r	14 mm
Typical hysteresis	2 mm

Actuator 2

Type	PSEN cs6.1 low profile glue
Assured operating distance S_{ao}	5 mm
Assured release distance S_{ar}	20 mm
Typical operating distance S_o	10 mm
Typical release distance S_r	12 mm
Typical hysteresis	2 mm

Operating distances when the actuator approaches square marking

Actuator 3

Type	PSEN cs6.1 low profile screw
Assured operating distance S_{ao}	5 mm
Assured release distance S_{ar}	20 mm
Typical operating distance S_o	10 mm
Typical release distance S_r	12 mm
Typical hysteresis	2 mm

Operating distances when the actuator approaches triangle marking

Actuator 1

Type	PSEN cs6.1
Assured operating distance S_{ao}	4 mm
Assured release distance S_{ar}	12 mm
Typical operating distance S_o	5 mm
Typical release distance S_r	8 mm
Typical hysteresis	2 mm

Operating distances when the actuator approaches semicircle marking

Actuator 1

Type	PSEN cs6.1
Assured operating distance S_{ao}	3 mm
Assured release distance S_{ar}	16 mm
Typical operating distance S_o	6 mm
Typical release distance S_r	8 mm
Typical hysteresis	2 mm

Actuator 2

Type	PSEN cs6.1 low profile glue
Assured operating distance S_{ao}	2 mm
Assured release distance S_{ar}	14 mm
Typical operating distance S_o	5 mm
Typical release distance S_r	7 mm
Typical hysteresis	2 mm

Actuator 3

Type	PSEN cs6.1 low profile screw
Assured operating distance S_{ao}	2 mm
Assured release distance S_{ar}	14 mm
Typical operating distance S_o	5 mm
Typical release distance S_r	7 mm
Typical hysteresis	2 mm

Mechanical data

Min. distance between safety switches	250 mm
Sensor flush installation in accordance with EN 60947-5-2	yes, follow installation guidelines
Connection type	M12, 5-pin male connector

Mechanical data

Material	PA+GF, PBT, polycarbonate
Max. torque setting for fixing screws	1 Nm
Dimensions	
Height	26,4 mm
Width	101,6 mm
Depth	19 mm
Weight	68 g

Where standards are undated, the 2015-11 latest editions shall apply.

Technical details actuator

Order no. 542183 PSEN cs6.1

See below for more order numbers

General

Certifications	CE, EAC, ECOLAB, TÜV, UKCA, cULus Listed
Sensor's mode of operation	Transponder
Coding level in accordance with EN ISO 14119	High
Pilz coding type	fully coded

Transponder

Frequency band	122 kHz - 128 kHz
----------------	--------------------------

Environmental data

Ambient temperature	
In accordance with the standard	EN 60068-2-14
Temperature range	-25 - 70 °C
Max. at max. operating height	+60 °C
Max. at max. operating height <2000 m	+70 °C
Storage temperature	
In accordance with the standard	EN 60068-2-1/-2
Temperature range	-40 - 85 °C
Climatic suitability	
In accordance with the standard	EN 60068-2-30
Humidity	93 % r. h. at 40 °C
Max. operating height above sea level	4000 m
EMC	EN 60947-5-3
Vibration	
In accordance with the standard	EN 60947-5-2
Frequency	10 - 55 Hz

Classification according to ZVEI, CB24I

The following tables describe the classes and specific values of the product interface and the classes of interfaces compatible with it. The classification is described in the ZVEI position paper "Classification of Binary 24 V Interfaces - Functional Safety aspects covered by dynamic testing".

Single-pole output	
Interfaces	
Source	
Interface	Sensor
Class	C2
Drain	
Interface	
Class	C1, C2
Source parameters	
Max. test pulse duration	150 µs
Max. rated current	0,1 A
Max. capacitive load	40 nF

Safety characteristic data

NOTICE

You must comply with the safety characteristic data in order to achieve the required safety level for your plant/machine.

Operating mode	EN ISO 13849-1: 2015 PL	EN ISO 13849-1: 2015 Category	EN 62061 SIL CL	EN 62061 PFH _D [1/h]	IEC 61511 SIL	IEC 61511 PFD	EN ISO 13849-1: 2015 T _M [year]
2-ch. OSSD	PL e	Cat. 4	SIL CL 3	9,56E-10	–	8,51E-06	20

Explanatory notes for the safety-related characteristic data:

- ▶ The SIL CL value in accordance with EN 62061 corresponds to the SIL value in accordance with EN 61508.
- ▶ T_M is the maximum mission time in accordance with EN ISO 13849-1. The value also applies as the retest interval in accordance with EN 61508-6 and IEC 61511 and as the proof test interval and mission time in accordance with EN 62061.

All the units used within a safety function must be considered when calculating the safety characteristic data.

INFORMATION

A safety function's SIL/PL values are **not** identical to the SIL/PL values of the units that are used and may be different. We recommend that you use the PASCAL software tool to calculate the safety function's SIL/PL values.

Supplementary data

Radio approval

USA/Canada

FCC ID: VT8-PSENCSS5
IC: 7482A-PSENCSS5

FCC/IC-Requirements:

This product complies with Part 15 of the FCC Rules and with Industry Canada licence-exempt RSS standards.

Operation is subject to the following two conditions:

- 1) this product may not cause harmful interference, and
- 2) this product must accept any interference received, including interference that may cause undesired operation.

Changes or modifications made to this product not expressly approved by Pilz may void the FCC authorization to operate this equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Le présent produit est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes:

- (1) le produit ne doit pas produire de brouillage, et
- (2) l'utilisateur de le produit doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

EC declaration of conformity

This product/these products meet the requirements of the following directives of the European Parliament and of the Council.

- ▶ 2006/42/EC on machines
- ▶ 2014/53/EC on radio equipment

The complete EC Declaration of Conformity is available on the Internet at www.pilz.com/downloads.

Representative: Norbert Fröhlich, Pilz GmbH & Co. KG, Felix-Wankel-Str. 2, 73760 Ostfildern, Germany

UKCA-Declaration of Conformity

This product(s) complies with following UK legislation:

- ▶ Supply of Machinery (Safety) Regulations 2008
- ▶ Radio Equipment Regulations 2017

The complete UKCA Declaration of Conformity is available on the Internet at www.pilz.com/support/downloads.

Representative: Pilz Automation Technology, Pilz House, Little Colliers Field, Corby, Northamptonshire, NN18 8TJ United Kingdom, eMail: mail@pilz.co.uk
