## Introduction

### Validity of documentation

This documentation is valid for the product PSEN cs6.1p from Version 2.0.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

### Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

### Definition of symbols

Information that is particularly important is identified as follows:

#### **DANGER!**

This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

#### **WARNING!**

This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

#### **CAUTION!**

This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

#### **NOTICE**

This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

### INFORMATION

This gives advice on applications and provides information on special features.

## Safety

### Intended use

The safety functions of the safety switch are:

- ▶ Safe shutdown of safety outputs when the actuator is removed beyond the assured release distance  $s_{ar}$  or when the actuator is not detected
- ▶ Remain shut down safely after the actuator has been removed

The safety switch meets the requirements in accordance with:

- ▶ EN 60947-5-3: PDDB with one of the approved actuators
- ▶ EN 62061: SIL CL 3
- ▶ EN ISO 13849-1: PL e (Cat. 4)
- ▶ EN ISO 14119: Coding level High, type 4

The safety switch may only be used with one of the approved actuators.

The safety level PL e (Cat. 4)/SIL CL 3 is only achieved if

- ▶ the safety outputs use 2-channel processing.

### Improper use

The following is deemed improper use in particular

- ▶ Any component, technical or electrical modification to the product,
- ▶ Use of the product outside the areas described in this operating manual,
- ▶ Use of the product outside the technical details (see [Technical details](#)  41]).

### NOTICE

#### EMC-compliant electrical installation

The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

Approved actuators:

- ▶ PSEN cs6.1
- ▶ PSEN cs6.1 low profile glue
- ▶ PSEN cs6.1 low profile screw

## Safety regulations

### Safety assessment

Before using a device, a safety assessment in accordance with the Machinery Directive is required.

The product as an individual component fulfils the functional safety requirements in accordance with EN ISO 13849 and EN 62061. However, this does not guarantee the functional safety of the overall plant/machine. To achieve the relevant safety level of the overall plant/machine's required safety functions, each safety function needs to be considered separately.

### Additional documents that apply

Please read and take note of the following documents.

#### Only for use of the Safety Device Diagnostics (SDD):

- ▶ Fieldbus module operating manual, for example SDD ES PROFINET
- ▶ System description "Safety Device Diagnostics"

#### For the use of passive junctions:

- ▶ Operating manual of a passive junction, for example:
  - PSEN ix2 F4 code
  - PSEN ix2 F8 code
  - PDP67 F 4 code
  - PSEN Y junction

You will need to be conversant with the information in these documents in order to fully understand this operating manual.

### Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by persons who are competent to do so.

A competent person is a qualified and knowledgeable person who, because of their training, experience and current professional activity, has the specialist knowledge required. To be able to inspect, assess and operate devices, systems and machines, the person has to be informed of the state of the art and the applicable national, European and international laws, directives and standards.

It is the company's responsibility only to employ personnel who

- ▶ Are familiar with the basic regulations concerning health and safety / accident prevention,
- ▶ Have read and understood the information provided in the section entitled Safety
- ▶ Have a good knowledge of the generic and specialist standards applicable to the specific application.

**Warranty and liability**

All claims to warranty and liability will be rendered invalid if

- ▶ The product was used contrary to the purpose for which it is intended,
- ▶ Damage can be attributed to not having followed the guidelines in the manual,
- ▶ Operating personnel are not suitably qualified,
- ▶ Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

**Disposal**

- ▶ In safety-related applications, please comply with the mission time  $T_M$  in the safety-related characteristic data.
- ▶ When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

**For your safety****WARNING!****Loss of safety function due to manipulation of the interlocking device**

Manipulation of the interlocking device may lead to serious injury and death.

- You should prevent any possibility of the interlocking device being manipulated through the use of a spare actuator.
- Keep the substitute actuator in a safe place and protect it from unauthorised access.
- If substitute actuators are used, these must be installed as described under [Installation](#) [ 30].
- If the original actuators are replaced with substitute actuators, the original actuators must be destroyed before disposal.

- ▶ Do not remove the connector's protective cap until you are just about to connect the unit. This will prevent potential contamination.

## Unit features

- ▶ Transponder technology for presence detection
- ▶ Pilz coding type: fully coded
- ▶ Dual-channel operation
- ▶ 2 safety inputs for series connection of multiple safety switches
- ▶ 2 safety outputs
- ▶ Safety Device Diagnostics (SDD)
  - Safety Device Diagnostics can be used to retrieve sensor information on one or more sensors, to perform actions and to read and write configuration parameters
  - Manipulation protection in accordance with ISO 14119 is possible by verifying the short name of the actuator through the controller via SDD communication
- ▶ Diagnostic input for Y1 for Safety Device Diagnostics (SDD)
- ▶ Signal output/diagnostic output Y32 for Safety Device Diagnostics
- ▶ LED display for:
  - State of actuator detection
  - State of the inputs
  - Supply voltage/fault
- ▶ 4 actuation directions, each with 3 approach directions (see [Explanation of markings](#)  12)
  - Square marking for normal operating distance
  - Triangle marking for short operating distance
  - 2 semicircle markings for a lateral approach. Please note the Lateral and vertical offset with the lateral approach to the semicircle marking.

The guaranteed safe operating distances for the specified selections only apply when the actuator approaches the switch vertically. With the other approach directions, the operating distances may sometimes be considerably larger (particularly when approaching the semicircle).

## Function description

### Basic function

The safety outputs may have a high or low signal, depending on the position of the actuator and the signal status of the safety inputs.

**Electrical states of the safety inputs and outputs (when switch is ready for operation: DEVICE LED is green):**

Actuator in the re-response range	Safety input S11	Safety input S21	Safety output 12	Safety output 22	Signal output Y32 (without use of the SDD)
Yes	High	High	High	High	High
Yes	Low	Low	Low	Low	High
No	x	x	Low	Low	Low
Yes	High	Low	High	Low	High
Yes	Low	High	Low	High	High

x: High or low signal

### Feasibility monitoring for safety inputs S11 and S21

- ▶ If one safety input switches from high to low, while the other safety input remains high, an unequal status is displayed: **Input LED has quick yellow flashes and Device LED flashes red**
- ▶ If this safety input switches back from low to high, while the other safety input remains high, a feasibility error is displayed and a partial operation lock is triggered: **Input LED flashes yellow and Device LED flashes red**

A switch to a high signal will only lead to normal switch operation if both inputs had a low signal. From this moment on, the switch to high may occur (partial operation lock see [Error display \[38\]](#)).

#### ▶ Diagnostic input Y1

If a fieldbus module of the SDD is used, the diagnostic input Y1 is automatically activated and data is read.

If no fieldbus module of the SDD is used, the diagnostic input Y1 is not used.

#### ▶ Signal output/diagnostic output Y32 in SDD mode

If a fieldbus module of the SDD is used, the signal output/diagnostic output Y32 is activated for writing data.

### Block diagram

### Safety Device Diagnostics

Safety Device Diagnostics is an option that can be selected independently of the safety-related wiring.

When using the Safety Device Diagnostics, up to 16 sensors connected in series can be connected as a subscriber to a fieldbus module.

The communication of the sensors with the fieldbus module is automatically built up again with each new supply of the supply voltage. As a result, a sensor can be exchanged, e.g. when servicing, without the need for special measures.

An exchange can be detected via the fieldbus module e.g. through the serial number.

► With Safety Device Diagnostics there are the following diagnostic options for the fieldbus module:

- Poll information of the sensors (examples: what sensor in the series has switched, at what point could there be an open circuit in the series connection)
- Read configuration parameters of the sensor (examples: Number of teach-in processes remaining, serial number of the sensor)
- Perform actions (example: poll updated actuator name)

The results of the sensor diagnostics can be checked already during the installation phase via the display in the fieldbus module, without the need to connect the fieldbus module to the network.

► With Safety Device Diagnostics there are the following diagnostic options for the fieldbus module for simple wiring:

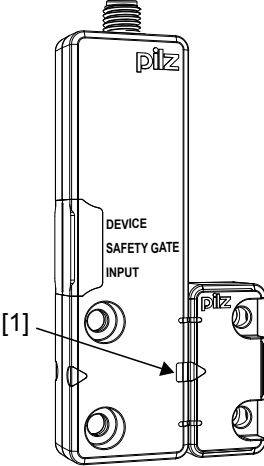

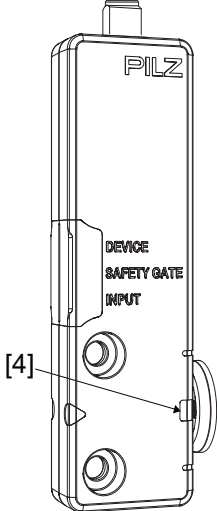

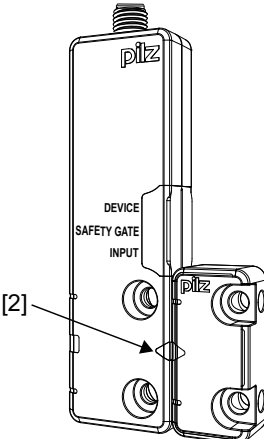

- Information is passed on via the fieldbus module directly to the network
- Mappings of the signal outputs to the sensor are automated by the SDD.

This prevents wiring errors and an expansion or reduction of the sensors is possible without the need to change existing wiring.

- Wiring in accordance with IP20: Rapid installation in the control cabinet is enabled.
- Wiring in accordance with IP67: Various passive junctions can be used (see [Order references for accessories](#) [50]) to connect several sensors with only one cable from the field in the control cabinet.

Further information on Safety Device Diagnostics can be found in [Additional documents that apply](#) [7].

### Operating distances

<p>Actuator PSEN cs6.1</p>	<p>Actuator PSEN cs6.1 low profile glue or PSEN cs6.1 low profile screw</p>	
 <p>[1]</p>	 <p>[4]</p>	<p>[1] Actuator PSEN cs6.1 aligned to the square marking on the switch</p> <p><math>S_{ao}</math> Assured operating distance: 8 mm  <math>S_{ar}</math> Assured release distance: 20 mm  <math>S_o</math> Typical operating distance: 11 mm  <math>S_r</math> Typical release distance: 14 mm</p> <p>[4] Actuator PSEN cs6.1 low profile glue or PSEN cs6.1 low profile screw aligned to the square marking on the switch</p> <p><math>S_{ao}</math> Assured operating distance: 5 mm  <math>S_{ar}</math> Assured release distance: 20 mm  <math>S_o</math> Typical operating distance: 10 mm  <math>S_r</math> Typical release distance: 12 mm</p>
 <p>[2]</p>		<p>[2] Actuator PSEN cs6.1 aligned to the triangle marking on the switch</p> <p><math>S_{ao}</math> Assured operating distance: 4 mm  <math>S_{ar}</math> Assured release distance: 12 mm  <math>S_o</math> Typical operating distance: 5 mm  <math>S_r</math> Typical release distance: 8 mm</p> <p>The alignment of the actuators PSEN cs6.1 low profile glue or PSEN cs6.1 low profile screw to the triangle marking is not provided for</p>

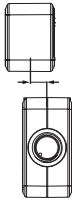

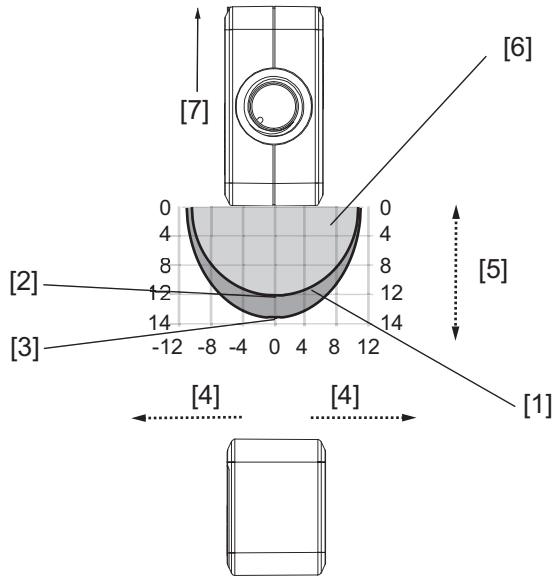

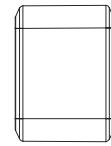

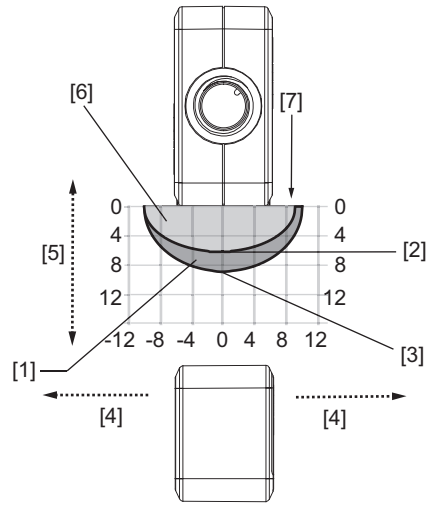

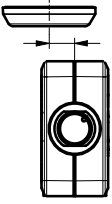

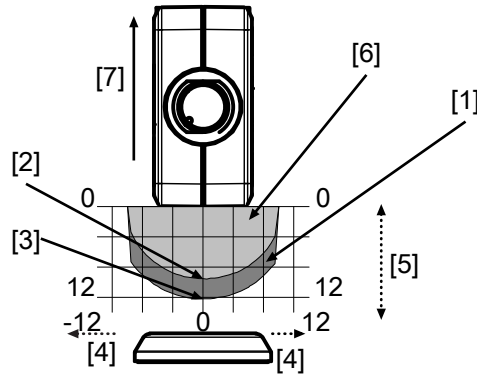

The switching distances of the actuators PSEN cs6.1 low profile glue and PSEN cs6.1 low profile screw were determined under the following conditions:

- ▶ Assured operating distance  $S_{ao}$  and assured release distance  $S_{ar}$ 
  - Measurement over the entire temperature range
  - Installed on various base materials
  - Taking into account product tolerances
- ▶ Typical operating distance  $S_o$  and typical release distance  $S_r$ 
  - Measured at room temperature
  - Installed on plastic

**Lateral and vertical offset**

**Lateral offset when aligning to the triangle or square marking**

Alignment 1: Actuator PSEN cs6.1 aligned to the square marking on the switch		Alignment 2: Actuator PSEN cs6.1 aligned to the triangle marking on the switch	
			
Alignment 1: Actuator PSEN cs6.1 low profile glue or PSEN cs6.1 low profile screw aligned to the square marking on the switch		Alignment 2: Actuator PSEN cs6.1 low profile glue or PSEN cs6.1 low profile screw aligned to the triangle marking on the switch	
		<p>Actuator PSEN cs6.1 low profile glue or PSEN cs6.1 low profile screw to triangle marking is not suitable because the operating distances are too low.</p>

## Wiring

### Important information

- ▶ Information given in the [Technical details](#)  41] must be followed.
- ▶ Switch off the supply voltage before disconnecting the plug-in connection.
- ▶ Make sure that when connecting or separating the connector the pollution degree 1 or 2 is maintained.
- ▶ The max. cable length  $I_{\max}$  in the input circuit is calculated from
  - the max. cable capacitance at the safety outputs (see [Technical data](#)  41]).
  - the minimum permitted supply voltage at the safety switch (19.2 V).
- ▶ The power supply must meet the regulations for extra low voltages with protective electrical separation (SELV, PELV).
- ▶ The inputs and outputs of the safety switch must have a protective separation to voltages over 60 VDC.

#### INFORMATION

Only use safety relays with a 24 VDC supply voltage. Safety relays with a wide-range power supply or in AC device versions have internal potential isolation and are not suitable as evaluation devices.

- ▶ The supply voltage to the safety switch must be protected with a 2 A to 4 A quick-acting fuse.
- ▶ Ensure the wiring and EMC requirements of EN 60204-1 are met.
- ▶ When connecting in series, consider the requirements of manipulation protection and the protection against bypassing or from overriding the safety switch (EN ISO 14119).
- ▶ When the safety inputs of the safety switch are controlled by an upstream device, and they are not wired with 24 V,
  - They must be monitored for shorts across contacts (e.g. by PSEN cs, PSEN ml, PSEN sg or PSEN sl) **or**
  - The faults at the safety inputs that can occur by shorts across contact will have to be excluded by suitable measures (e.g. wiring in accordance with EN 602041).

**Pin assignment, connector and cable**

PIN	Connection designation	Function	Wire colour
1	S21	Input, channel 2	white
2	A1	+24 VUB	brown
3	12	Output, channel1	green
4	22	Output, channel2	yellow
5	Y32	Signal output/diagnostic output	grey
6	S11	Input, channel 1	pink
7	A2	0 V UB	blue
8	Y1	Diagnostics input	red

The wire colour also applies for the cable available from Pilz as an accessory.

**NOTICE**

The inputs S11 and S21 may only be used for the series connection with Pilz sensors.

### Connection to evaluation devices

Make sure that the selected evaluation device has the following property:

- ▶ OSSD signals are evaluated through 2 channels with plausibility monitoring

Note:

- ▶ Information given in the [Technical details \[41\]](#) must be followed.
- ▶ The use of Safety Device Diagnostics is described in the System Description "Safety Device Diagnostics".

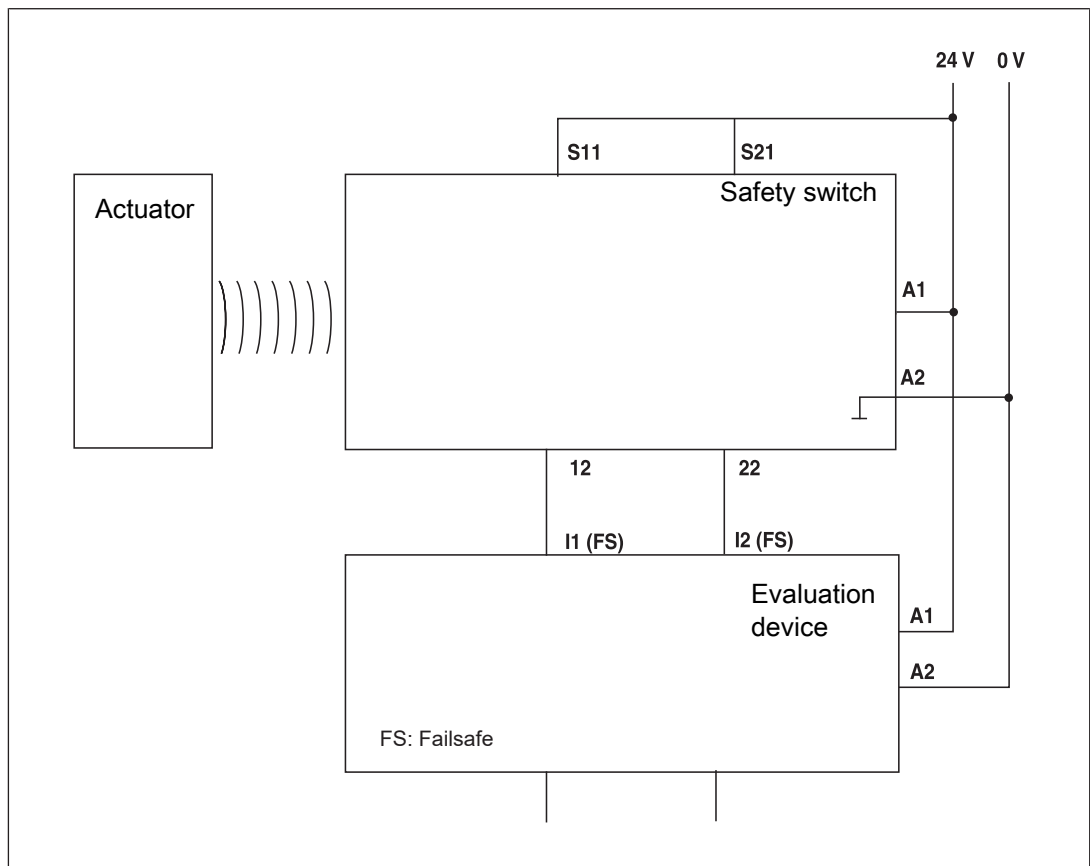

#### CAUTION!

**Do not connect the signal output to 0 V!**

If the signal output Y32 is connected to 0 V, the safety switch may be damaged as a result. Connect the signal output Y32 to a consumer, e.g. to the input on a control system, or leave the signal output unconnected. Also note the max. current (see [Technical details \[41\]](#)).

### Single connection

Connection diagram, single connection without SDD

Connection diagram, single connection with SDD

### Series connection

The safety sensors PSENcode are also suitable for series connection with other sensors.

The series connection of maximum 32 sensors PSENcs 5.x and PSENcs 6.x is approved for SIL CL 3 without using the SDD.

When using the SDD, the series connection of maximum 16 sensors PSENcs 5.x and PSENcs 6.x is approved

In series connections with use of the SDD, use only use sensors that are suitable for SDD.

In practice, the maximum possible number will be limited by the following parameters, among others:

- ▶ The required SIL level (e.g. SIL CL 3),
- ▶ the required performance level (e.g. PL e (Cat. 4)),
- ▶ the maximum delay or risk time permitted by the application.

Ensure there is sufficient supply voltage, taking inrush currents and fusing into consideration.

#### CAUTION!

##### Extension of delay-on de-energisation

When several (n) devices are connected in series, the delay-on de-energisation time adds with the number of interconnected safety switches.

The max. delay-on de-energisation is made up of the risk time (see [Technical details](#) [ 41])

+ (n-1) x max. delay-on de-energisation of the inputs

+ max. delay-on de-energisation of the evaluation device

- ▶ When making series connections using SDD, only use the following passive junctions.
  - PSEN ix2 F4 code
  - PSEN ix2 F8 code
  - PSEN Y junction M8-M12/M12 PIGTAIL
  - PSEN Y junction M8 SENSOR
  - PSEN Y junction M8 cable channel

**Function test when safety channels are connected in series**

Before commissioning and after each change, check that the safety function is guaranteed when the gates are opened. To do this, open each gate individually and check the status at the inputs on the evaluation device:

- ▶ Close all the gates.

There must be high signals at the inputs on the evaluation device (e.g. S11, S21 or I1, I2).

- ▶ Open one gate; the other gates remain closed.

There must be low signals at the inputs on the evaluation device (e.g. S11, S21 or I1, I2).

- ▶ Close the gate again.

High signals must return at the inputs on the evaluation device (e.g. S11, S21 or I1, I2).

- ▶ Repeat the test for each gate.

- ▶ If the input signals do not react as described above, check and rectify the wiring and carry out the test again.

Connection diagram, series connection without SDD

Connection diagram, series connection with SDD

### Connection to Pilz evaluation devices

The safety switch PSEN cs6.1p can be connected to Pilz evaluation devices, for example.

Suitable Pilz evaluation devices are, for example:

- ▶ PNOZelog for safety gate monitoring
- ▶ PNOZpower for safety gate monitoring
- ▶ PNOZsigma for safety gate monitoring
- ▶ PNOZ X for safety gate monitoring
- ▶ PNOZmulti for safety gate monitoring  
Configure the safety switch in the PNOZmulti Configurator with switch type 3.
- ▶ PSS for safety gate monitoring with standard function block SB064, SB066 or FS\_Safety Gate

The correct connection to the respective evaluation device is described in the operating manual for the evaluation device. Make sure that the connection is made in accordance with the specifications in the operating manual for the selected evaluation device.

The connections to two evaluation devices are shown on the following pages, by way of example:

- ▶ PNOZ s3 and
- ▶ PNOZmulti

## Teaching in the actuator

### Teaching in the actuator for the first time:

The first actuator to be detected by the safety switch (see [Intended use \[6\]](#)) is taught in automatically as soon as it is brought into the response range.

### To teach in a new actuator:

A maximum of 8 learning procedures are possible.

1. The actuator that is to be taught in must be brought into the safety switch's response range as the only transponder. As soon as the actuator is detected, the "Safety Gate" LED will flash yellow.
2. After 20 s has elapsed, the "Safety Gate" LED turns to quick yellow flashes. Trigger a system reset in the next 120 s by interrupting the power supply.
3. When the supply voltage is switched back on, the learning procedure is complete and the number of permitted additional learning procedures is reduced by 1.

### NOTICE

- The actuator must not be removed during the learning procedure.
- It is no longer possible to re-teach this actuator on the same safety switch.

## Installation

### General

#### CAUTION!

#### Potential loss of safety function due to changed device properties

The unit's properties may be affected if installed in an environment containing electrically or magnetically conductive material.

- Please check the operating distances and the assured release distance.

- ▶ The safety switch and actuator should be installed opposite each other in parallel. Make sure that the actuator is aligned to the marking on the safety switch that guarantees the operating distance required by the plant design (see [Operating distances](#) [41]).
- ▶ Torque setting: Please note the information provided under [Technical details](#) [41].
- ▶ The distance between two safety switches must be maintained (see [Technical details](#) [41]).

The distance can be undershot in certain application cases (see diagrams).

- ▶ Make sure that the safety switch and actuator cannot be used as an end stop.
- ▶ Please note the installation measures in accordance with EN ISO 14119 for a safety switch design 4 and with level of coding High.
- ▶ Please note the permitted bending radii for the cable (see [Technical details](#) [41]), to avoid excessive force on the individual strands.
- ▶ Make sure that the bend protection is not damaged. Such damage can cause the whole product to fail.
- ▶ For simpler installation, the mounting brackets (see [Order reference for Accessories](#) [50]) can be used.

**WARNING!**

**Loss of safety function due to non-permitted enlargement of the assured release distance when using both switching lobes (aligned at semicircle marking)**

Depending on the application, serious injury or death may result.

- Install a mechanical stop when using the response range at the semicircle marking, to avoid unintended switching off at the limit of the response range and to prevent the maximum release distance from enlarging impermissibly by using both switching lobes.

**Legend**

- [1] Hysteresis
- [2] Typical operating distance  $S_o$
- [3] Typical release distance  $S_r$
- [4] Offset in mm (distance of the middle of the actuator to the zero line in the grid)
- [5] Operating distance in mm
- [6] Response range
- [7] Connector on the safety switch
- [8] Limit of response range, position of gate hinge
- [9] Status of LED
- [10] Sensing face of the actuator, labelled with Pilz logo
- [11] Distance from the front edge of the safety switch to the limit of the response range (position of the gate end stop) = 15.9 mm
- [12] Distance from the rear edge of the safety switch to the limit of the response range (position of the gate end stop) = 10.5 mm

**Safety switch**

- ▶ Safety switches should only be secured using M4 screws with a flat head (e.g. M4 cheese-head or pan head screws).

**Procedure:**

1. Provide the mounting surface with two drill holes for fastening the safety switch (see [Dimensions](#) [ 39]).
2. Use a screw to fix the safety switch to the mounting surface.  
Make sure that the safety switch marking that is to be used for operation can be operated using the actuator from the right side.
3. Do not fully tighten the second screw on the safety switch.

**Actuator 6.1****Procedure actuator PSEN cs6.1**

1. Provide the mounting surface with two drill holes for fastening the actuator (see [Dimensions](#) [ 39]).
2. Use a screw to fix the actuator to the mounting surface.  
Make sure that the actuator with the marking (triangle) points towards the marking on the safety switch.
3. Do not fully tighten the second screw on the actuator.

**Actuator 6.1 low profile****WARNING!****Loss of the manipulation protection by inadequate environmental conditions**

The loss of the manipulation protection can allow manipulation of the interlocking device and it may lead to serious injury or death.

- Make sure that the actuator has no direct or repetitive contact with materials such as methyl ethyl ketone (MEK), petrol or isopropanol.

- ▶ The actuator is secured against unauthorised removal, and against contamination by the sealing. The seal should be regarded as equivalent to using permanent fastenings in accordance with EN ISO 14119.
- ▶ By removing the actuator, the actuator will be destroyed.
- ▶ The actuator's adhesive force on the materials aluminium, stainless steel, polycarbonate and glass was checked. For deviating surface materials check the adhesive force on the surface.
- ▶ After a cure time of 24 hours, 90 % of the final adhesive force are achieved. The hardening must take place at min. 20 °C. With lower temperatures the cure time is clearly extended.
- ▶ No continuous force must affect the actuator.

**Procedure actuator PSEN cs6.1 low profile glue:**

1. To seal the low profile actuators correctly, it is necessary to prepare the surface to which the actuator is to be attached.

The surface must be clean, dry and free of grease.

Wipe off any solved grease and contaminations with a new, dry paper cloth.

Clean the surface with 70% isopropanol. Use lint-free paper cloths and change the paper cloths frequently.

The adhesive surface is clean when the paper remains clean.

The cleaned surfaces must be sealed immediately to prevent any new contamination by dust and fingerprints.

2. Remove the protective foil from the assembly aid and fix it flush with the sides (see diagram) to the required sensing area of the safety switch.

3. Only when using the square marking:

Cut off the excess strip on the assembly aid along the perforation (e.g. using a pair of scissors).

4. Place the actuator into the assembly aid so that the actuator's covered adhesive surface is on the surface.

Make sure that the actuator's centre is on the same level as the orientation arrows of the sensor and in the centre of the sensor.

Fig.: Safety switch with assembly aid and low profile actuator oriented to semicircle and square marking

**Legend**

[1] Assembly aid for low profile actuator

[2] low profile actuator

5. Remove the protective foil from the adhesive foil of the actuator.  
Do not touch the adhesive foil after removing the protective foil!
6. Close the safety gate carefully and then press the actuator to the adhesive position.
7. Press on the actuator for at least 3 seconds with approx. 50 N.

After this time, an adhesive force of approx. 50 % is achieved. The full adhesive force is achieved after 72 hours at an ambient temperature of at least 20 °C.

8. Check the adhesive force of the glue after 10 minutes.

The actuator must no move when pressed sideways.

#### **Procedure actuator PSEN cs6.1 low profile screw**

1. Provide the mounting surface with a drill hole for an additional actuator screw connection (see [Dimensions](#) [ 39]).

2. To seal the low profile actuators correctly, it is necessary to prepare the surface to which the actuator is to be attached.

The surface must be clean, dry and free of grease.

Wipe off any solved grease and contaminations with a new, dry paper cloth.

Clean the surface with 70% isopropanol. Use lint-free paper cloths and change the paper cloths frequently.

The adhesive surface is clean when the paper remains clean.

The cleaned surfaces must be sealed immediately to prevent any new contamination by dust and fingerprints.

3. Remove the protective foil from the adhesive foil of the actuator.

Do not touch the adhesive foil after removing the protective foil!

4. Insert the screw into the actuator's hole and position the screw at the hole on the mounting surface.

To screw on the actuator, use the supplied plastic M3 countersunk screw.

When using a screw mad from metal the operating distance change, please note the [Warning](#) [ 30].

5. Then press the actuator firmly to the gluing position.

6. Press on the actuator for at least 3 seconds with approx. 50 N.

After this time, an adhesive force of approx. 50 % is achieved. The full adhesive force is achieved after 72 hours at an ambient temperature of at least 20 °C.

7. Check the adhesive force of the glue after 10 minutes.

The actuator must no move when pressed sideways.

8. Additionally, attach the actuator using the M3 plastic screw supplied.

**Align safety switch and actuator**

- ▶ The actuator should only be secured using M4 screws with a flat head (e.g. M4 cheese-head or pan head screws).

The actuator should be protected from unauthorised removal and from contamination. Close the mounting holes using the seals provided. The use of seals should be regarded as equivalent to using permanent fastenings in accordance with EN ISO 14119.

**Legend**

- [1] 4 seals for actuators
- [2] Unused seals
- [3] 2 seals for actuators
- [4] 2 seals for switches, 2 seals unused

Fig.: Applying the screw covers [1] and [3] on the actuator

Fig.: Applying the screw cover [4] on the switch

**Procedure:**

1. Align the safety switch and tighten the screws.
2. Actuator PSEN cs6.1  
Align the actuator and tighten the screws.
3. Use the seals to close the mounting holes on the sensing face of the safety switch (see diagram, [4]).

**Use in operating heights higher than 2000 m above sea level**

When using the PSEN cs6.1p note the reduced max. ambient temperature of +60 °C at a height of 2000 m to 4000 m.

**Adjustment**

- ▶ The stated operating distances (see [Technical details \[41\]](#)) only apply when the safety switch and actuator are installed facing each other in parallel. Operating distances may deviate if other arrangements are used.
- ▶ Note the maximum permitted lateral and vertical offset (see [Operating distances \[12\]](#) and [Lateral and vertical offset \[14\]](#)).

## Operation

### NOTICE

The safety function should be checked after initial commissioning and each time the plant/machine is changed. The safety functions may only be checked by qualified personnel.

### Status indicators:

#### Legend:

	LED off
	LED on
	LED flashes (500 ms on, 500 ms off)
	LED flashes quickly (50 ms on, 950 ms off)
	LED flashes very quickly (30 ms on, 470 ms off)

### Normal mode

LED status		Switch status
Device	Green	Ready for operation
Safety Gate	yellow	Actuator is within the response range
	Off	Actuator is outside the response range
Input	yellow	Both safety inputs are high
	Off	Both safety inputs are low

### LED status, teach-in actuator

LED status			Switch status	Remedy / measure
Device	Safety Gate	Input		
Green	yellow	Display not definitive	Teaching actuator. Duration approx. 20 seconds	-
Green	yellow	Display not definitive	Actuator teach-in complete.	Switch voltage off and then on again.

## Error display

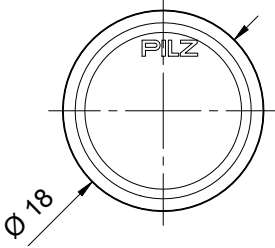

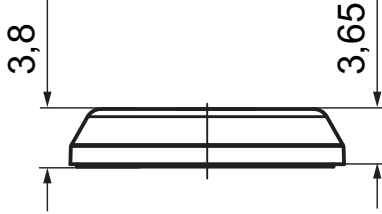

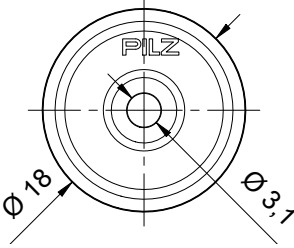

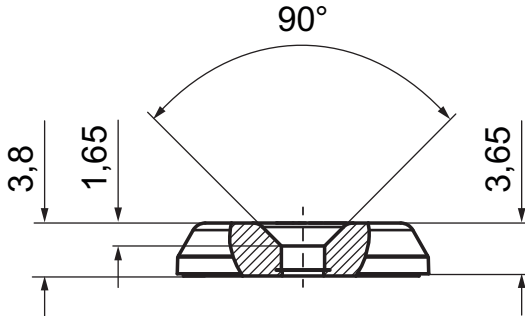

LED status			Switch status	Remedy / measure
Device	Safety Gate	Input		
 Red	 off	 off	Internal error on switch	Change the switch.
 Red	 Yellow	 Yellow	Supply voltage is outside the tolerance range	Ensure the voltage supply corresponds to the <a href="#">Technical details</a> [41].
 Yellow	Display not definitive	Display not definitive	Supply voltage is at the limit of the tolerance range	Ensure the voltage supply corresponds to the <a href="#">Technical details</a> [41].
 Red	Display of last status	Display of last status	Outputs in fault condition	Check the outputs and switch the voltage off and then on again.
 Green	 Yellow	Display not definitive	Wrong actuator	Use the actuator that has been taught-in or teach in a new actuator (see <a href="#">Teaching in the actuator</a> [29]).
 off	 Yellow	 Yellow	Switch doesn't start	Change the switch.

### Dimensions in mm

Safety switch	
<p>Front view of the safety switch. Dimensions: total height 90, top mounting height 7.6, width 26.4, bottom LED height 7.4, and two circular features spaced 22 and 7.5 from the bottom edge. Callouts [1], [2], and [3] point to a square marking, a triangle marking, and LEDs respectively.</p>	<p>Side view of the safety switch. Dimensions: total height 97.6 and width 13. Callouts [4] point to two semicircle markings on the side.</p>
Actuator	
<p>Front view of the actuator. Dimensions: total height 22, width 18, and various offsets of 7.5, 4, and 8.3. Callout [2] points to a triangle marking.</p>	<p>Side view of the actuator. Dimensions: total height 37, width 13, and offsets of 8.3 and 9. Callout [2] points to a triangle marking.</p>

**Legend:**

- [1] Square marking
- [2] Triangle marking
- [3] LEDs
- [4] Semicircle marking

Actuator PSEN cs6.1 low profile glue	
 <p>Top view of the low profile glue actuator. The diameter is indicated as <math>\varnothing 18</math>. The PILZ logo is visible in the center.</p>	 <p>Side view of the low profile glue actuator. The height is indicated as 3,8 mm and the width as 3,65 mm.</p>
Actuator PSEN cs6.1 low profile screw	
 <p>Top view of the low profile screw actuator. The diameter is indicated as <math>\varnothing 18</math> and the central hole diameter as <math>\varnothing 3,1</math>. The PILZ logo is visible in the center.</p>	 <p>Side view of the low profile screw actuator. The height is indicated as 3,8 mm and the width as 3,65 mm. A 90° angle is shown between the top surface and the side surface.</p>

### **Classification according to ZVEI, CB24I**

The following tables describe the classes and specific values of the product interface and the classes of interfaces compatible with it. The classification is described in the ZVEI position paper "Classification of Binary 24 V Interfaces - Functional Safety aspects covered by dynamic testing".

<b>Input</b>		
<b>Interfaces</b>		
Drain		
Class		C2
Source		
Class		C2, C3
<b>Drain parameters</b>		
Test pulse duration, safety outputs		450 $\mu$ s
Min. test pulse interval		1,25 ms
Min. input resistance		9,9 kOhm
Max. capacitive load		1 nF

<b>Single-pole output</b>		
<b>Interfaces</b>		
Source		
Interface		Sensor
Class		C2
Drain		
Class		C1, C2
<b>Source parameters</b>		
Max. test pulse duration		150 $\mu$ s
Max. rated current		0,1 A
Max. capacitive load		40 nF

## Safety characteristic data

### NOTICE

You must comply with the safety characteristic data in order to achieve the required safety level for your plant/machine.

Operating mode	EN ISO 13849-1: 2015	EN ISO 13849-1: 2015	EN 62061 SIL CL	EN 62061 PFH <sub>D</sub> [1/h]	IEC 61511 SIL	IEC 61511 PFD	EN ISO 13849-1: 2015 T <sub>M</sub> [year]
	PL	Category					
2-ch. OSSD	PL e	Cat. 4	SIL CL 3	9,56E-10	–	8,51E-06	20

Explanatory notes for the safety-related characteristic data:

- ▶ The SIL CL value in accordance with EN 62061 corresponds to the SIL value in accordance with EN 61508.
- ▶ T<sub>M</sub> is the maximum mission time in accordance with EN ISO 13849-1. The value also applies as the retest interval in accordance with EN 61508-6 and IEC 61511 and as the proof test interval and mission time in accordance with EN 62061.

All the units used within a safety function must be considered when calculating the safety characteristic data.

### INFORMATION

A safety function's SIL/PL values are **not** identical to the SIL/PL values of the units that are used and may be different. We recommend that you use the PASCAL software tool to calculate the safety function's SIL/PL values.

## Supplementary data

### Radio approval

USA/Canada

**FCC** ID: VT8-PSENCSS5  
**IC:** 7482A-PSENCSS5

FCC/IC-Requirements:

This product complies with Part 15 of the FCC Rules and with Industry Canada licence-exempt RSS standards.

Operation is subject to the following two conditions:

- 1) this product may not cause harmful interference, and
- 2) this product must accept any interference received, including interference that may cause undesired operation.

Changes or modifications made to this product not expressly approved by Pilz may void the FCC authorization to operate this equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Le présent produit est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes:

- (1) le produit ne doit pas produire de brouillage, et
- (2) l'utilisateur de le produit doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

### Order reference

#### Safety switch

Product type	Features		Order no.
PSEN cs6.1p 1switch	Safety switch, fully coded	8-pin M8 male connector	542150

#### Actuator

Product type	Features		Order no.
PSEN cs6.1 1actuator	Actuator, fully coded		542180
PSEN cs6.1 low profile glue 1 actuator	Actuator, fully coded For the gluing as a permanent fastening incl. assembly aid made of foam		542187
PSEN cs6.1 low profile screw 1 actuator	Actuator, fully coded For gluing as a permanent fastening optional: Additional screw connection using M3 plastic screw incl. assembly aid made of foam		542188

**Complete systems**

Product type	Features		Order no.

### Accessories for Safety Device Diagnostics

Product type	Features	Connection type	Order no.
PSEN ix2 F4 code	Interface for connecting max. 4 PSEN safety sensors	Spring-loaded terminal	535111
PSEN ix2 F8 code	Interface for connecting max. 8 PSEN safety sensors	Spring-loaded terminal	535112
SDD ES ETH	Modbus/TCP fieldbus module for Safety Device Diagnostics	Spring-loaded terminal	540130
SDD ES Profibus	Profibus fieldbus module for Safety Device Diagnostics	Spring-loaded terminal	540132
SDD ES Profinet	Profinet fieldbus module for Safety Device Diagnostics	Spring-loaded terminal	540138

### EC declaration of conformity

This product/these products meet the requirements of the following directives of the European Parliament and of the Council.

- ▶ 2006/42/EC on machines
- ▶ 2014/53/EC on radio equipment

The complete EC Declaration of Conformity is available on the Internet at [www.pilz.com/downloads](http://www.pilz.com/downloads).

Representative: Norbert Fröhlich, Pilz GmbH & Co. KG, Felix-Wankel-Str. 2, 73760 Ostfildern, Germany

### UKCA-Declaration of Conformity

#### UKCA-Declaration of Conformity

This product(s) complies with following UK legislation:

- ▶ Supply of Machinery (Safety) Regulations 2008
- ▶ Radio Equipment Regulations 2017

The complete UKCA Declaration of Conformity is available on the Internet at [www.pilz.com/support/downloads](http://www.pilz.com/support/downloads).

Representative: Pilz Automation Technology, Pilz House, Little Colliers Field, Corby, Northamptonshire, NN18 8TJ United Kingdom, eMail: [mail@pilz.co.uk](mailto:mail@pilz.co.uk)
