Introduction

Validity of documentation

This documentation is valid for the product PST 4. It is valid until new documentation is published.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

Definition of symbols

Information that is particularly important is identified as follows:

DANGER!

This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

WARNING!

This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

CAUTION!

This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

NOTICE

This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

INFORMATION

This gives advice on applications and provides information on special features

Safety

Intended use

The safety relay PST 4 provides a safety-related interruption of a safety circuit.

The safety relay meets the requirements of EN 60947-5-1, EN 60204-1 and VDE 0113-1 and may be used in applications with

Safety gates

The following is deemed improper use in particular

- Any component, technical or electrical modification to the product,
- Use of the product outside the areas described in this manual,
- Use of the product outside the technical details (see Technical details [15]).

NOTICE

EMC-compliant electrical installation

The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

Safety regulations

Safety assessment

Before using a device it is necessary to perform a safety assessment in accordance with the Machinery Directive.

Functional safety is guaranteed for the product as a single component. However, this does not guarantee the functional safety of the overall plant/machine. In order to achieve the required safety level for the overall plant/machine, define the safety requirements for the plant/machine and then define how these must be implemented from a technical and organisational standpoint.

Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by competent persons.

A competent person is a qualified and knowledgeable person who, because of their training, experience and current professional activity, has the specialist knowledge required. To be able to inspect, assess and operate devices, systems and machines, the person has to be informed of the state of the art and the applicable national, European and international laws, directives and standards.

It is the company's responsibility only to employ personnel who

- Are familiar with the basic regulations concerning health and safety / accident prevention,
- Have read and understood the information provided in the section entitled Safety
- Have a good knowledge of the generic and specialist standards applicable to the specific application.

Warranty and liability

All claims to warranty and liability will be rendered invalid if

- The product was used contrary to the purpose for which it is intended,
- Damage can be attributed to not having followed the guidelines in the manual,
- Operating personnel are not suitably qualified,
- Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

Disposal

- In safety-related applications, please comply with the mission time T_M in the safety-related characteristic data.
- When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

For your safety

The unit meets all the necessary conditions for safe operation. However, please note the following:

Note for overvoltage category III: If voltages higher than low voltage (>50 VAC or >120 VDC) are present on the unit, connected control elements and sensors must have a rated insulation voltage of at least 250 V.

Unit features

- Positive-guided relay outputs:
 - 6 safety contacts (N/O), instantaneous
 - 4 auxiliary contacts (N/C), instantaneous
- Connection options for:
 - Safety gate limit switches
 - Start button
- LED indicator for:
 - Supply voltage
 - Input state channel 1/2
 - Output state channel 1/2
- See order reference for unit types

Safety features

The safety relay meets the following safety requirements:

- The circuit is redundant with built-in self-monitoring.
- The safety function remains effective in the case of a component failure.
- The correct opening and closing of the safety function relays is tested automatically in each on-off cycle.

Block diagram/terminal configuration

Types: AC

- U_B: 24 VAC; Order no. 720301
 U_B: 110 VAC; Order no. 720308

*Insulation between the non-marked area and the relay contacts: Basic insulation (over-voltage category III), Protective separation (overvoltage category II)

Type: DC

U_B: 24 VDC; Order no. 720300

^{*}Insulation between the non-marked area and the relay contacts: Basic insulation (over-voltage category III), Protective separation (overvoltage category II)

Function Description

The safety gate monitor PST 4 provides a safety-oriented interruption of a safety circuit. When operating voltage is supplied the "POWER" LED will light. The unit is ready for operation when the feedback loop Y1-Y2 and the start circuit S33-S34 are closed.

- Input circuit closed within the simultaneity period (safety gate closed)
 - The LEDs "CH.1 IN", "CH.2 IN" and "CH.1 OUT" and "CH.2 OUT" are lit
 - Safety contacts 13-14, 23-24, 33-34, 43-44, 53-54 and 63-64 are closed, auxiliary contacts 71-72, 81-82, 91-92 and 01-02 are opened. The unit is active.
- Input circuit is opened (safety gate opened)
 - The LEDs "CH.1 IN" and "CH.2 IN" go out.
 - Safety contacts 13-14, 23-24, 33-34, 43-44, 53-54 and 63-64 are opened redundantly, auxiliary contacts 71-72, 81-82, 91-92 and 01-02 are closed.
 - The LEDs "CH.1 OUT" and "CH.2 OUT" go out.

If the input circuits have already switched before supply voltage is applied, the PST 4 stops the plant being enabled, to prevent an automatic start-up in accordance with EN 60204 Pt 7.5.

Reset function

The safety contacts and auxiliary contacts remain in rest condition (safety contacts are open and auxiliary contacts are closed) if the supply voltage is applied when the safety gate is closed. The safety and auxiliary contacts are not activated until the safety gate has been opened and then closed again. N/C contacts in series with the safety gate limit switches S1 and S2 can simulate the opening of the safety gate.

Operating modes

- Dual-channel operation with detection of shorts across contacts: Redundant input circuit, PST 4 detects
 - earth faults in the start and input circuit,
 - short circuits in the input circuit,
 - shorts across contacts in the input circuit.
- Automatic start: Unit is active once the input circuit has been closed.
- Manual start: Unit is active once the input circuit and the start circuit are closed.
- Increase in the number of available contacts by connecting contact expander modules or external contactors/relays.

Output safe: Safety contacts

[1]: Automatic start

[2]: Manual start

a: Input circuit closes before start circuit

b: Start circuit closes before input circuit

t₁: Switch-on delay

t₂: Delay-on de-energisation

t₃: Recovery time

Installation

- The unit should be installed in a control cabinet with a protection type of at least IP54.
- Use the notch on the rear of the unit to attach it to a DIN rail (35 mm).
- When installed vertically: Secure the unit by using a fixing element (e.g. retaining bracket or end angle).

Wiring

Please note:

- Information given in the "Technical details [15]" must be followed.
- Outputs 13-14, 23-24, 33-34, 43-44, 53-54, 63-64 are safety contacts; outputs 71-72, 81-82, 91-92, 01-02 are auxiliary contacts (e.g. for display).
- Do **not** use auxiliary contacts 71-72, 81-82, 91-92, 01-02 for safety circuits!
- Do not connect undesignated terminals.
- To prevent contact welding, a fuse should be connected before the output contacts (see Technical details [15]).
- Calculation of the max. cable length I_{max} in the input circuit:

$$I_{max} = \frac{R_{lmax}}{R_l / km}$$

 R_{lmax} = max. overall cable resistance (see Technical details [15]) R_{l} / km = cable resistance/km

- ▶ Use copper wire that can withstand 60/75 °C.
- Sufficient fuse protection must be provided on all output contacts with capacitive and inductive loads.
- Do not switch low currents using contacts that have been used previously with high currents
- On 24 VDC devices:

The power supply must comply with the regulations for extra low voltages with protective electrical separation (SELV, PELV) in accordance with VDE 0100, Part 410.

▶ Ensure the wiring and EMC requirements of EN 60204-1 are met.

Preparing for operation

Supply voltage	AC	DC
	Γ	L1
	A2 \$	—— N
	<u>+</u>	FE A2 0 L-

Input circuit	Dual-channel	Dual-channel with reset function
Safety gate with detection of shorts across contacts	S11 \$ S2 S2 S23 \$ S24 \$	S11 \$\frac{1}{\S1}\$ \$\frac{1}{\S2}\$ \$\frac{1}{

Start circuit	Automatic start	Manual start
	\$33 ¢ \$34 ¢	\$33 O S34 O

NOTICE

In the event of an automatic start or manual start with bridged start contact (fault):

The unit starts up automatically when the safeguard is reset, e.g. when the E-STOP pushbutton is released. Use external circuit measures to prevent an unexpected restart.

Feedback loop	Without feedback loop monitoring	With feedback loop monitoring
Link or contacts from external contactors	Y1 \$\frac{1}{2}\$	Y1
Start-up testing		

INFORMATION

The feedback circuit must be closed at least 500 ms before limit switch S1 is operated and may only be opened once limit switch S1 has been operated.

Legend

- S1/S2: Safety gate switch
- S3: Start button
- ► 1: Switch operated
- : Gate open
- : Gate closed

Operation

When the relay outputs are switched on, the mechanical contact on the relay cannot be tested automatically. Depending on the operational environment, measures to detect the non-opening of switching elements may be required under some circumstances.

When the product is used in accordance with the European Machinery Directive, a check must be carried out to ensure that the safety contacts on the relay outputs open correctly. Open the safety contacts (switch off output) and start the device again, so that the internal diagnostics can check that the safety contacts open correctly

- for SIL CL 3/PL e at least 1x per month
- for SIL CL 2/PL d at least 1x per year

NOTICE

The safety function should be checked after initial commissioning and each time the plant/machine is changed. The safety functions may only be checked by qualified personnel.

Status indicators

LEDs indicate the status and errors during operation:

LED on

POWER

Supply voltage is present.

——— CH.1 IN

Channel 1 input circuit is closed.

——— CH.2 IN

Channel 2 input circuit is closed.

————— CH.1 OUT

Channel 1 safety contacts are closed.

CH.2 OUT

Channel 2 safety contacts are closed.

Faults - Interference

- Earth fault: The supply voltage fails and the safety contacts open. Once the cause of the respective fault has been rectified and the supply voltage is switched off for approx. 1 minute, the unit is ready for operation again.
- Contact malfunctions: If the contacts have welded, reactivation will not be possible after the input circuit has opened.
- ▶ LED "POWER" does not light: Short circuit or no supply voltage.
- CH.1 OUT and CH.2 OUT do not light:
 Only one limit switch is closed. Simultaneity was not maintained.

Safety characteristic data

NOTICE

You must comply with the safety characteristic data in order to achieve the required safety level for your plant/machine.

Operating mode	EN ISO 13849-1: 2015	EN ISO 13849-1: 2015	EN 62061 SIL CL	EN 62061 PFH _D [1/h]		IEC 61511 PFD	EN ISO 13849-1: 2015
	PL	Category					T _м [year]
_	PL e	Cat. 4	SIL CL 3	5,14E-09	SIL 3	4,98E-06	20

All the units used within a safety function must be considered when calculating the safety characteristic data.

INFORMATION

A safety function's SIL/PL values are **not** identical to the SIL/PL values of the units that are used and may be different. We recommend that you use the PAScal software tool to calculate the safety function's SIL/PL values.

Supplementary data

CAUTION!

It is essential to consider the relay's service life graphs. The relay outputs' safety-related characteristic data is only valid if the values in the service life graphs are met.

The PFH value depends on the switch frequency and the load of the relay output. If the service life graphs are not accessible, the stated PFH value can be used irrespective of the switch frequency and the load, as the PFH value already considers the relay's B10d value as well as the failure rates of the other components.

Service life graph

The service life graphs indicate the number of cycles from which failures due to wear must be expected. The wear is mainly caused by the electrical load; the mechanical load is negligible.

Example

Inductive load: 0.2 A

Utilisation category: AC15

Contact service life: 4 000 000 cycles

Provided the application to be implemented requires fewer than 4 000 000 cycles, the PFH value (see Technical details) can be used in the calculation.

To increase the service life, sufficient spark suppression must be provided on all output contacts. With capacitive loads, any power surges that occur must be noted. With DC contactors, use flywheel diodes for spark suppression.

Order reference

Product type	Features	Connection type	Order No.
PST 4	24 VDC	Screw terminals	720 300
PST 4	24 VAC	Screw terminals	720 301
PST 4	110 VAC	Screw terminals	720 308
PST 4	230 VAC	Screw terminals	720 309

EC declaration of conformity

This product/these products meet the requirements of the directive 2006/42/EC for machinery of the European Parliament and of the Council. The complete EC Declaration of Conformity is available on the Internet at www.pilz.com/support/downloads. Representative: Norbert Fröhlich, Pilz GmbH & Co. KG, Felix-Wankel-Str. 2, 73760 Ostfildern, Germany

Pilz develops environmentally-friendly products using ecological materials and energy-saving technologies. Offices and production facilities are ecologically designed, environmentally-aware and energy-saving. So Pilz offers sustainability, plus the security of using energy-efficient products and environmentally-friendly solutions.
