REMOTE MONITORING

N-Tron provides multiple tools to monitor 716M12 switch activities. A convenient web-based interface is available to view and configure switch options, as well as to monitor network traffic, alarms and trend information. For tightly controlled environments, N-View™ OPC server software easily combines with HMI control and monitoring applications to form a complete surveillance solution for N-View-enabled switches. For local monitoring, each switch features configurable LEDs to indicate power failure and N-Ring status.

N-RING™ TECHNOLOGY

Advanced N-Ring technology provides expanded capacity, detailed fault diagnostics and fast ~30ms healing times in rings composed of N-Tron fully managed switches. The integrity of the N-Ring is continually monitored for error conditions. If a fault is detected, the ring converts to a daisy chain topology and restores communications within ~30ms. For convenience, users can easily access a detailed ring map and fault location chart through the ring manager's browser or the OPC server. Each N-Ring accommodates up to 250 fully-managed N-Tron switches. N-Link easily connects multiple rings, creating additional pathways to critical applications and increasing overall network resiliency.

INDUSTRIAL SPECIFICATIONS

Standard industrial product features include high MTBF, extended shock and vibration specifications, redundant power inputs and a wide operating temperature range.

EASE OF USE

N-Tron's auto sensing capabilities allow all 10/100BaseTX ports to automatically negotiate maximum speed and performance. If preferred, ports can be hardcoded using the user interface. A high-speed processor enables simultaneous wire speed capability on all 100BaseTX ports.
