BUILT FOR EXTREME CONDITIONS

The rugged N-Tron® 712FX4-HV compact, fully managed industrial Ethernet switch offers a powerful combination of eight 10/100BaseTX copper ports and four 100Base fiber ports, as well as a hardened metal enclosure for maximum durability. It is ideally suited for use in industrial applications such as factory floor control networks, utilities, rail, intelligent traffic control and transportation, wind turbines, wastewater treatment facilities, and other extreme networking environments that demand high reliability, superior noise immunity, ultimate ruggedness, and support for extended distances.

REMOTE MONITORING OPTIONS

Web browser and N-View OPC (OLE for process control) server software provides configuration and monitoring capability. N-View software easily combines with HMI software to monitor network traffic, alarms and trends. SNMP is also available for switch link and status monitoring. Status LEDs are configurable to indicate power failure and N-Ring status.

N-RING TECHNOLOGY

N-Ring technology provides expanded ring capacity, detailed fault diagnostics, and fast 30ms healing time. The ring manager validates the integrity of the ring using health check packets and quickly converts the ring to a linear topology within ~30ms when an error is detected. The health status of a ring comprised of all N-Tron fully managed switches may be monitored. A detailed ring map and fault location chart may be accessed by the ring manager's web browser or the OPC server. N-Link allows the linking of two N-Rings. Up to 250 fully managed N-Tron switches are supported in an N-Ring topology.

INDUSTRIAL SPECIFICATIONS

High MTBF, extended shock and vibration specifications, wide operating temperature range and redundant power inputs are standard features.

EASE OF USE

N-Tron's auto sensing capabilities allow all 10/100BaseTX ports to automatically negotiate maximum speed and performance. By default, advanced processing enables simultaneous full wire speed functionality on all ports. If, however, the application requires hard-coded values, the process can be easily handled through the user interface.
