

The SCADAfence Appliance

The SCADAfence Appliance is a 1U rack mounted appliance providing full visibility of network assets, traffic, events and security risks in industrial networks.

It automatically discovers all network assets, shows full details of network traffic, performs deep packet inspection of industrial protocols and protects OT networks from malicious or accidental damage.

The appliance works by listening non-intrusively to network traffic. It can easily and safely be connected to any production network.

Specs

CPU	RAM	Storage	I/O
Intel Xeon 8 cores /16 threads 2.1GHz	16GB (2x8GB RDIMM 2666MT/S)	2x480GB SSD drives, with RAID 1	4x1Gb Ports

Benefits

- Non-intrusive, listens to network traffic on a mirror port.
- Automatic detection of all network assets and communications.
- Deep packet inspection and visibility of industrial protocols communication.
- Detection and alerting of operational risks, anomalies, and cyber security events.
