Water & Wastewater

“Logic, Inc. empowers water and wastewater plants with smarter automation for a sustainable future.”

SCADA & DATA COLLECTION

SERVERS

PLCs & I/O

VARIABLE FREQUENCY DRIVES

FLOW & PRESSURE SENSORS

ALARM SYSTEMS

INDUSTRIAL NETWORKING

POWER SUPPLIES

RADIO COMMUNICATIONS

INDUSTRIAL & PANEL PCs

SCADA & Reporting Solutions

Software to increase visibility and improve operations throughout your systems and facilities. Aveva offers comprehensive technologies such as IIoT, edge, cloud, artificial intelligence, advanced 3D visualization, and the digital twin to help manage and maintain your assets.

- InTouch – Local HMIs and Small SCADA systems
- System Platform – Distributed SCADA systems and redundancy
- Historian
- Reports for Operations
- Operator Rounds
- InSight - Cloud Historian
- CONNECT - Cloud Database & AI Assistant

Drives

Is the world leader in variable frequency drives, coupling premium quality drive hardware with advanced functionality designed to improve the performance and reliability of your water and wastewater facilities and infrastructure. Features include intelligent multi-pump control, cavitation detection, flow calculation, and IEE519 compliant ultra-low harmonic technology.

Motors

Energy-efficient high quality UL motors including the popular Super-E family. Combine a Baldor motor with an ABB drive for a reliable, high-performance solution with the backing of unmatched expertise and support along with extended warranty options.

PLC/IO Solutions

Expands on traditional PLC technology with high performance and cost competitive controllers and remote I/O solutions. A focus on backwards compatibility ensures your system will be supported and easily upgradeable long term.

Alarm Systems

A comprehensive alarm management and alarming tool with a variety of notification methods for use wherever data and events from SCADA need to be monitored.

Win-911 offers alarm notification software that supports one or two-way email and SMS-based notifications. In addition, this software has notifications via Voice over Internet Protocol (VoIP), as well as over fixed/analog lines.

Cyber Security

Is the global technology leader in OT & IoT cybersecurity. SCADAfence offers a full suite of industrial cybersecurity products that provides full

coverage of large-scale networks, offering best-in-class network monitoring, asset discovery, governance, remote access, and IoT device security.

Industrial Networking

Is a leading provider of industrial grade edge connectivity and network infrastructure solutions with solutions for remote automation, managed/unmanaged switches, computing, serial connectivity, and IP surveillance.

Offering N-Tron® and Sixnet® series Ethernet switches, cellular M2M devices, and communication adapters that support more than 300 industrial protocols to address a wide range of networking requirements.

Industrial System Servers

High performance fault-tolerant and redundant server solutions with a competitive total cost of ownership. Keep your critical systems and software running with 99.999% uptime capable and monitored server hardware.

Panel PCs & Computers

High quality industrial grade computing hardware for any level of performance required by your applications. Industrial box PCs, panel PCs, panel mount displays, thin clients all of which are highly customizable.

Radio Communications

4RF radios and cellular routers that are designed for quality and consistency with high performance no matter how demanding the requirements. The Aprisa SR and Aprisa SR+ are distance-engineered and optimized for SCADA and telemetry applications.

Remote Access

Remote gateways enabling data collection, programming, and troubleshooting from anywhere. Collect and visualize machine data on user-friendly dashboards with KPIs and generate alarms to prevent downtime.

Surge Protection

Keeping the world's critical networks and equipment protected from transient overvoltages. Whether a large magnitude lightning strike or the relentless barrage of switching events, our surge protectors keep sensitive electronics safe and operations uninterrupted.

Flow Sensors

Intelligent, easy, and cost-effective solutions for your applications requiring sensors, fieldbus, remote I/O, and RFID systems, and a wide variety of cordsets and connectors.

Power Supply

Power supply products with high reliability, long lifetime, and ease of use. Advanced redundancy and battery backup options ensure your systems keep running.

System Connectivity

Communication drivers for PLCs, I/O, and field devices. Highly configurable and easy to use. Also ideal for systems with legacy and specialty hardware.
